

GENERAL INFORMATION

HOHNER AUTOMATION, S.L. *The ideal collaborator for your project*

The central headquarters of Hohner Automation SL is situated in Breda, province of Girona, in the northwest of Spain, only a few kilometres away from the French border and very close to Barcelona, in one of the most deeply-rooted industrial networks of the country and with big firms, whose common impulse is investment in I+D+I.

Hohner Automation SL was founded in 1983. One of the founding partners, Juan Liarte, is still the major shareholder of the firm, thus guaranteeing the continuity and the compliance of the strategic plan that has taken the firm to the present level of development, on the basis of some fundamental, permanent and absolute values, such as **integrity, respect for the individual person** and the **environmental responsibility** and also on the basis of some of the firm's values: **client orientation**, investment in investigation and development and all those tools that help us become better as a firm at service of a client and of a very demanding market.

■ Our Quality Policy

We are a **client orientated** organisation. We are supported by a solid quality system that consolidates us as an **EFFICIENT, FLEXIBLE** and **EFFECTIVE** firm.

We foment the communication among all levels of our organisation. We believe that training is a fundamental tool for the personal development of our team. **Motivation** and participation of the personnel are fundamental points in our firm's policies.

Continuous improvement is a permanent objective for each person within the organisation. We work so that the continuous product, process and system improvement becomes reality, and we do this on the basis of data and information analysis.

Hohner Automaticos S.L. invests in investigation, development and innovation, thus assuring the long time success of the Firm.

Collaboration

Environmental responsibility

Design

Training

Communication

■ Our installations

One of the strong points of our firm is client service, and one of the tools that makes us flexible is the combination of our own engineering department that is available to the client for all types of application assessments, combined with our own departments of optical, mechanical and electronic manufacturing, which allows us to cover all the necessities of our clients with maximum efficacy.

■ Hohner Global

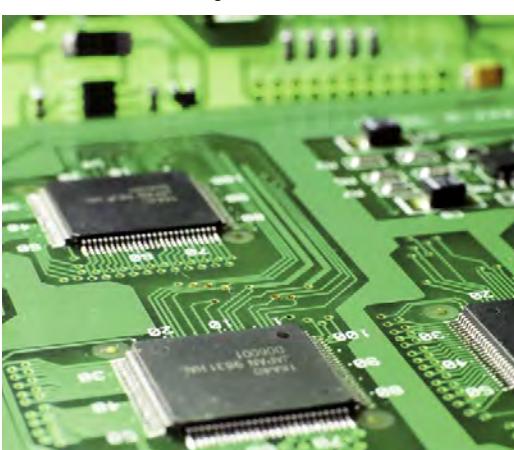

Our worldwide distributors are a team of very well trained persons who are familiar with the applications in the different sectors where our sensors can be applied.

You have a Hohner distributor very close to you

TECHNICAL CONSIDERATIONS

ELECTRICAL INSTALLATION INSTRUCTIONS

An incremental pulse generator in combination with an electronic counter or microprocessor is a precise method of measuring angular and linear displacements, but in any case, in order to guarantee this precision (not degraded by electrical interference), certain codes have to be taken into account.

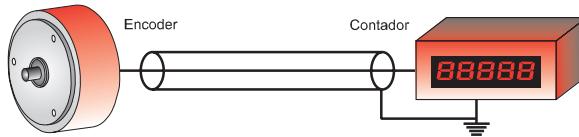

A- Reduce interference by employing screened cable that is correctly connected to earth, a suitable choice of counter position, cable output, adequate voltage and the possibility of using a differential level output (complementary).

B- Attenuate interference due to high frequency by means of an RC filter.

The various problems that may be encountered when installing a generator system-control system are listed below, together with some solutions for them.

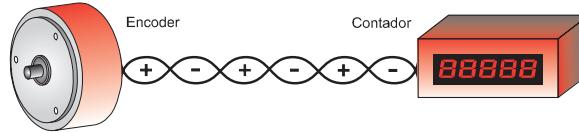

Electrostatic coupling or interference

Electric interference can be reduced by taking the corresponding precautions. The signals produced by the generator must be carried over suitable screened cables that are connected to earth at only one end. Unscreened wiring is only suitable for short runs and interference-free locations.

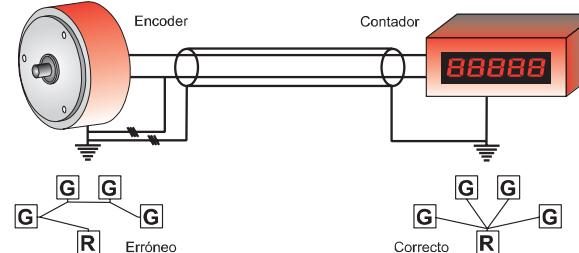

Electromagnetic coupling or interference

This type of effects with wide radii of action are more difficult to combat, one type of protection that can be employed is twisted pair wiring, which is normally sufficient as the voltages induced in the two conductors cancel each other out.

Earth point selection

The following rule should be followed when selecting an earth point: the earth connection must be made at only one point of the electric circuit, all other system points that require an earth connection must be made to this one single point.

Cable run

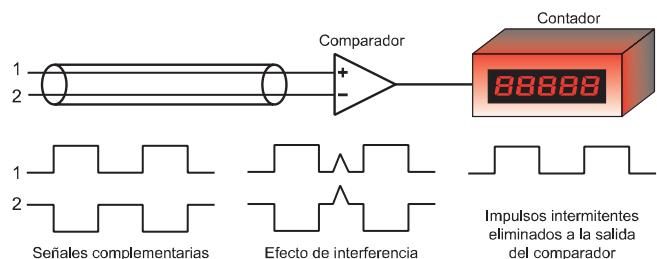

The cable between the generator and the counter must be separate from the high-voltage wiring and follow the shortest, most direct path between them.

Differential receiver

One effective form of interference rejection is to use a differential receiver. The signal and its complement are fed to the two inputs of the comparator. The comparator amplifies the difference between the two inputs and any interference pulses are ignored.

Signal loss over long distances.

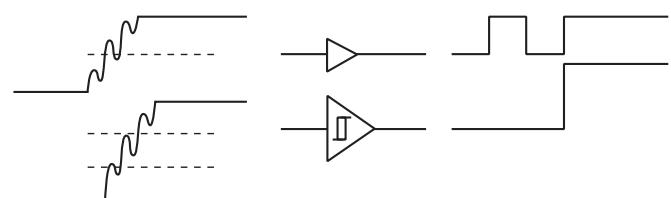

Voltage drops over long wiring runs can lead to problems. It is not only the current fed to the generator that is reduced, but that the high signal is reduced and the low signal is greater, therefore the resulting signal is outside the required limits. This is especially important in 5v systems, but 12v systems are also vulnerable to these effects.

Deformed pulses

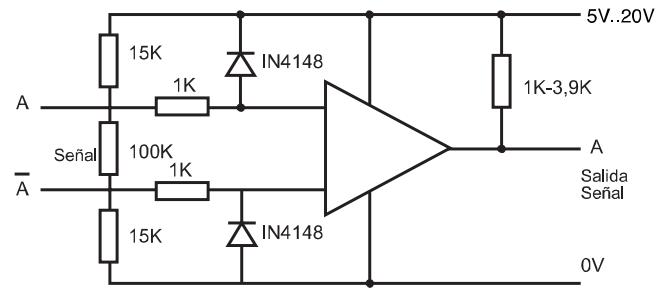

The presence of noise in slow signal changes can cause interference and give false measurement readings. This effect can be eliminated by using a Schmitt Trigger circuit at the input to the counter.

This circuit will ignore any changes in voltage that are less than the hysteresis.

Recommended input circuit

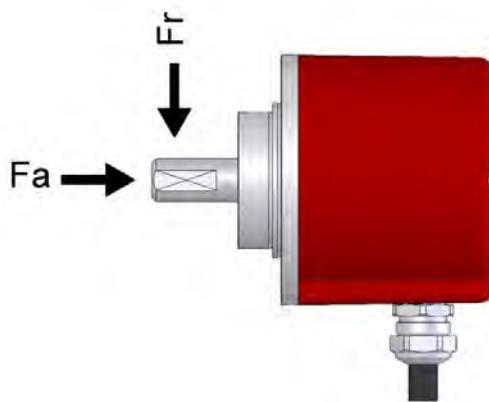

The following circuit provides high noise immunity and can be employed at 50 kHz

TECHNICAL CONSIDERATIONS

MECHANICAL INSTALLATION INSTRUCTIONS

All our pulse generators are fitted with preloaded ball bearings. The lifetime of these bearings largely depends on the load supported by the encoder shaft. Minimising this load is very important in order to guarantee a reasonable encoder lifetime. Under no circumstances should the axial (Fa) and radial (Fr) components at the end of the shaft must not exceed, even briefly, the established limits for each of the series.

There are several solutions for protecting the shaft from excessive loads depending on the encoder types and its applications:

Solid shaft encoders: connection with machine shaft

If the connection between the encoder shaft and that of the machine is rigid, any misalignment between the two can lead to very high loads on the bearings. In order to prevent this, the shafts must be connected by means of flexible couplings that are able to absorb the expected misalignment, vibration and any possible axial shaft movement.

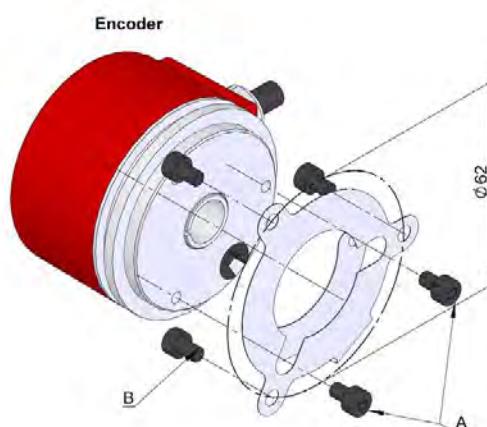

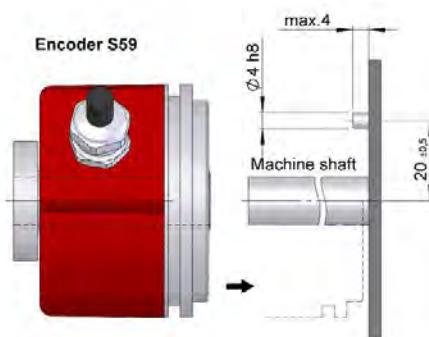

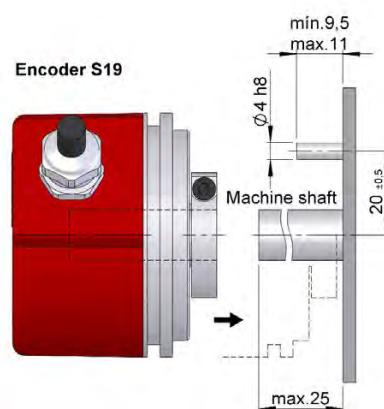

Solid shaft encoders: connections to measuring wheels, pulleys and pinions

These components can be fixed directly to the encoder shaft provided there are no radial loads produced in excess of the acceptable limits. Otherwise, an auxiliary shaft must be installed to support these components.

If measuring wheels are employed or rack and pinion measuring systems, it is possible that constant free-play cannot be guaranteed, which would make it necessary to use a flexible angle to secure the encoder to the machine chassis, making it possible to move it.

Hollow shaft encoders

In most cases these are fixed to a rigid shaft. In these cases, the encoder body must never be rigidly fixed to the machine chassis; instead, it must be simply prevented from rotating with the shaft. This may be achieved with an elastic flange or retaining pin.

PROTECTION AGAINST CONTACT

In order to comply with the CE Machine Directive, after installing the encoder, all rotating parts, such as shafts, couplings, wheels and clamps etc, must be protected against accidental contact during machine use.

INCREMENTAL ENCODERS

Incremental encoders are probably the most common type of encoder employed in industry because of the wide variety of applications in which they can be used.

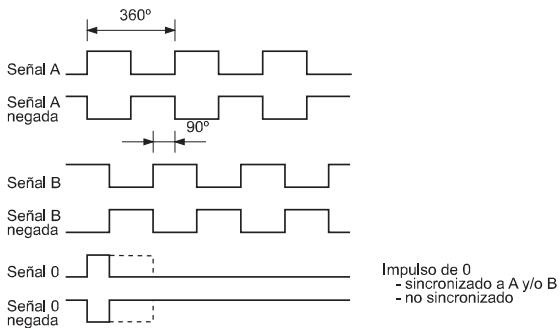

Incremental encoders generate pulses when the shaft is rotated, where the number of pulses per turn can determine a measurement of speed, length or position.

They can be classified, according to function, into unidirectional (a single output channel A), employed whenever it is not necessary to detect the direction of rotation, such as addition and subtraction in counters or tachometers, and bi-directional (with two output channels A and B), which allows the detection of rotation direction, with channel B being 90° out of phase with channel A.

DIGITAL SIGNALS

A third reference or zero signal (0 output channel) can be made available, which provides a pulse for each full turn of the shaft that, for example, permits a position reference to be determined and this signal can be synchronised with respect to channel A or B, or to both, and it can also be non-synchronised. All these signals are also available in inverted form, usually employed in environments where there is noise and/or long wiring runs.

Maximum frequency response

This is the maximum frequency at which the encoder can electrically respond, it refers to the number of output pulses the encoder can produce per second. This frequency is related to the encoder shaft rotation speed and the number of pulses, so that:

$$\text{Frequency (Hz)} = \frac{\text{No of shaft turns per minute}}{60} \times \frac{\text{No of encoder pulses}}{\text{No of encoder pulses}}$$

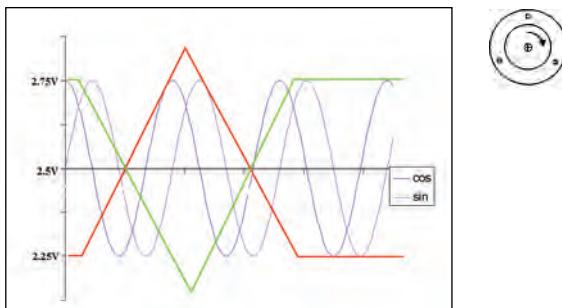

Precision

The unit of measure that defines the encoder precision is the "electrical degree". This is:

$$360^\circ \text{ électrical} = \frac{360^\circ \text{ mechanical}}{\text{No of encoder pulses}}$$

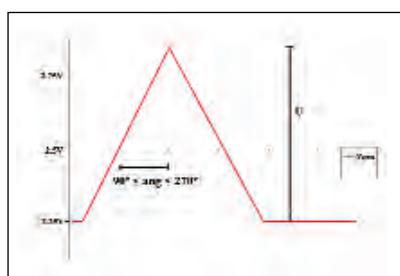

The error of a rotating encoder is not accumulative, it does not increment when the shaft rotates more than a full turn.

SIN COS signals

Rotation direction

The rotation direction criterion of the sine encoder is that shown in the figure. Therefore A goes before B if the shaft turns clockwise when observed from its own shaft.

Signals A Ainv, B Binv and Z Zinv

Signal A (cos) goes before B (sen) 90 degrees. The median value of signals A and B is 2.5V DC. Both signals can be obtained in their negative form Ainv and Binv as well as Zinv (Fig 1). The reference signal is Z (zero). The distance from zero mode to the peak value of Z is within a 90 to 270° electronics interval, as shown in figure 2. The tool component U is maintained between 0,2 < U < 1 V.

MECHANICAL SPECIFICATIONS

Materials

Cover: Stainless Steel AISI316
Housing: Stainless Steel AISI316
Shaft: Stainless Steel AISI316
Cable: TPE

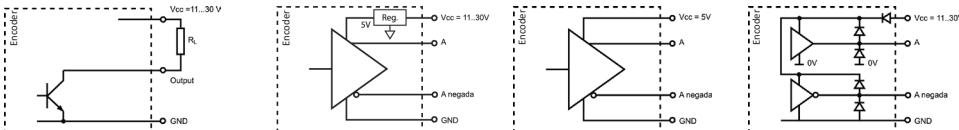

Bearings	Ballraces
Bearings lifetime	1×10^9 rev.
Maximum number of revolutions permitted mechanically	3600 rpm
Protection against dust and splashes according to DIN EN 60529	IP69K
Rotor inertia moment	30 gcm ²
Starting torque at 20°C (68°F)	$\leq 0,02$ Nm aprox.
Maximum load permitted on axial shaft	100 N
Maximum load permitted on radial shaft	100 N
Weight aprox.	0,7 Kg
Operating temperature range	-20°C to +80°C
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...2000Hz)
Shock according to DIN EN 60068-2-27	1000 m/s ² (6ms)
Maximum pulses per turn	50.000
Axial connection	2 meters cable (other cable lengths available on order) or Industrial connector M12 8p CCW. Female connector not included.

HIGH RESOLUTION INCREMENTAL SOLID SHAFT ENCODER FOR HEAVY DUTY INDUSTRIAL APPLICATIONS

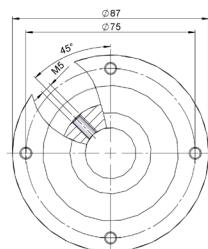

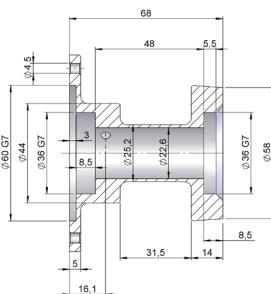

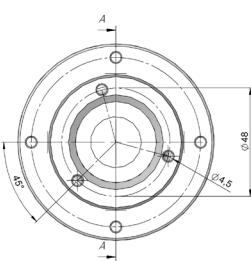

ACCESSORIES

not included

Coupling bell 90.1610

Hygienically designed to be in compliance with EHEDG criteria.

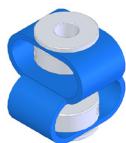

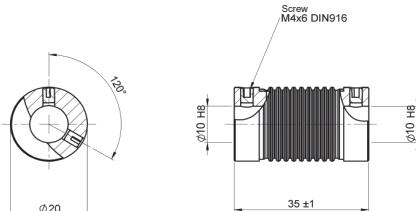

Mounting kit included: Flat seal D8 (1u), Cap M5 (1u), Flat seal Ø87 (1u), Flat seal Ø58 (1u), Sealing washer M4 EHEDG (7u), Screw EHEDG (7u).

* Send us your 3D and we will design the bell for your application.

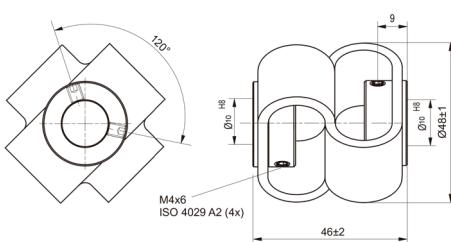

Coupling BFP-2035 10/10

Recommended coupling for 90.1610 coupling bell.

Coupling GFPI 20 10/10

Double loop stainless steel coupling, not compatible with coupling bell 90.1610.

Female connector 95.0007571

For M12 8p CCW connector
1,5 m cable.

* other length available on order

(*) Anti-rotation system type 0 (Expanding coupling 90.1101) and 1 (Flexible flange 90.1027) supplied assembled.

Anti-rotation systems type2 (Anti-turn stick 90.1041) supplied disassembled and includes the screws required for assembly.

Other required anti-rotation systems are not supplied assembled. All systems available in the sections "MOUNTING ACCESSORIES".

Assembly and disassembly instruction manual available in:
www.encoderhohner.com/product/serie-64/

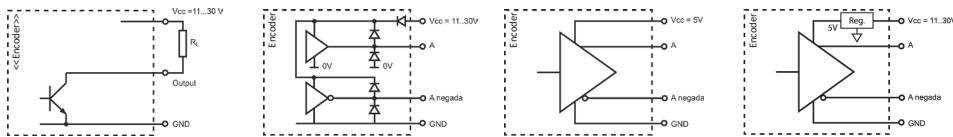

MECHANICAL SPECIFICATIONS

Materials	Housing: Aluminium Flange: Aluminium Shaft: Stainless Steel
Bearings	Ballraces
Bearings lifetime	1x10 ¹⁰ rev.
Housing fixing	Expanding coupling 90.1101 (assembled) Flexible flange 90.1027 (assembled) Anti-turn stick 90.1041 (self-assembly kit included)
Permitted misalignment	±0.5 mm axial (90.1101) ±0.5 mm axial, ±0.3 mm radial (90.1027, 90.1041)
Maximum number of revolutions permitted mechanically	6000 rpm
Protection against dust and splashes according to DIN EN 60529	IP54
Rotor inertia moment	≤ 3x10 ⁻⁶ Kgm ²
Starting torque at 20°C (68°F)	≤ 0,02 Nm
Maximum load permitted on axial shaft	40 N
Maximum load permitted on radial shaft	60 N
Weight aprox.	0,5 Kg
Operating temperature range	-20°C to +80°C - Standard -40°C to +80°C - Special Customer VT00
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...2000Hz)
Shock according to DIN EN 60068-2-27	1000 m/s ² (6ms)
Maximum pulses per turn	10.000
Helicoidal cable	2 meters cable (other cable lengths available or connector mounted at the end of the cable, upon request)

COMPACT INCREMENTAL HOLLOW SHAFT ENCODER FOR INDUSTRIAL APPLICATIONS

MECHANICAL SPECIFICATIONS

Materials	Cover: Aluminium Housing: Aluminium Shaft: Stainless Steel
Bearings	Ballraces
Bearings lifetime	1×10^{10} rev.
Housing fixing	Flexible flange
Shaft fixing	Clamp
Hollow shaft diameter	6, 8, 10 or 12 mm
Maximum number of revolutions permitted mechanically	6000 rpm
Protection against dust and splashes according to DIN EN 60529	IP65
Rotor inertia moment	30 gcm ²
Starting torque at 20°C (68°F)	$\leq 0,02$ Nm
Maximum load permitted on axial shaft	40 N
Maximum load permitted on radial shaft	80 N
Weight aprox.	0,5 Kg
Operating temperature range	-20°C to +80°C - Standard -40°C to +80°C - Special Customer ET00
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...2000Hz)
Shock according to DIN EN 60068-2-27	2500 m/s ² (6ms) [≤ 1.024 ppr] 1000 m/s ² (6ms) [> 1.024 ppr]
Maximum pulses per turn	5.000
Radial connection	2 meters cable or industrial connector M12 or M23 (other cable lengths available on order) Female connector not included

INCREMENTAL ENCODER FOR HEAVY DUTY INDUSTRIAL APPLICATIONS

Heavy Duty Encoder Incremental Encoder High shaft load capacity Vibration and shock resistant IP66 2,5 kV bearing isolation Express Delivery

- Resolution up to 5.000 pulses per turn
- External diameter 100 mm
- Blind hollow shaft from Ø 12 to 16 mm
- Hybrid bearings for extended lifetime
- Shaft insulation up to 2,5 kV
- Protection class IP66 according to DIN EN 60529
- Connection by terminal box with plug-in spring terminal connectors, rotatable through 360°
- Dual output available

Drawing blind hollow shaft type 12, connection type 1

ASSEMBLY INSTRUCTIONS

- 1) Required hole at the center of the sha
- 2) Assembly the magnet on the sha or (max. 0,3 Nm). Use retainer thr t screwdriver according to ISO 2380 (M3 Screw).

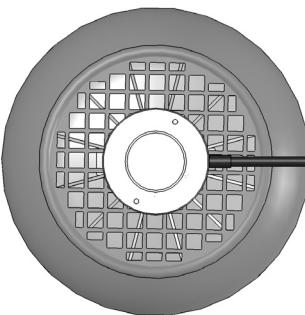

- 3) Put the cover on the motor and check the distance between magnet and end of the cover.

- 4) Extract cover of the motor.
- 5) Assembly the screws + washer and ferrule for the inner side of the cover.

- 6) Thread screws to the sensor (max. 0,9 Nm).

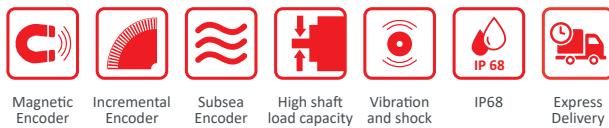

- 7) Check that the turn is free of contact between parts.

GENERAL INFORMATION PARALLEL

PARALLEL AND PARALLEL PROGRAMMABLE ABSOLUT ENCODERS

The absolut encoders are widely employed throughout industry. Unlike incremental measurement systems, absolut encoders always provide the true positional value. If the system is mechanically moved while power is off, when it is restored, the actual position will be immediately read.

Hohner offers a wide variety of absolut encoders, singleturn and multiturn, serial, parallel or analogue outputs, together with a wide range of output codes. It also provides the possibility of programmable encoders that allow the user to program the encoder's most important parameters.

All this enables us to offer our customers solutions to assign a specific and unique value to each shaft position.

Absolut encoders are classified into two groups: singleturn and multiturn. Singleturn absolut encoders code the 360° of a revolution into "n" point per turn and the code is repeated for each turn.

If a measurement is required for more than one turn of the shaft, a multiturn encoder is required, which is used to provide a precise position in longer paths.

the PC serial port.

By following the simple instruction in the manual, the user will be able to program the most important encoder parameters in a simple manner.

Output codes

In singleturn encoders, hohner can offer any resolution per turn, up to a maximum of 21 bits per turn (2.097.152 points per turn). Any number of turns 2^n , can be provided up to 4096 turns, in other words 2, 4, 8, 16, 32 etc up to 4096. Codes are available in both clockwise and counter clockwise directions. In the clockwise direction, the code increases when the shaft rotates in a clockwise direction looking at the shaft. In the counter clockwise direction, the code increases when the shaft rotates in a counter clockwise direction looking at the shaft.

Binary code

The binary code is based on 2, in other words, the information is coded using only "0" and "1".

Gray code

The Gray code is a special form of binary code where only one bit changes from one combination to another, this permits higher transmission speeds and greater security, because in the case of natural binary codes, for example, "n" bits are changed and there is a series of intermediate steps that can be interpreted as other positions, and depending on the data read speed of the control system, one of these intermediate positions could constitute incorrect data if one bit changes faster than the others.

The Gray code is therefore, a very reliable code for data transmission because in all cases of position to another, only one bit varies and there are no doubtful intermediate positions between one and the next.

In the resolutions that are not " 2^n ", the Excess Gray code allows the last combination to the first to also change by only one bit. For example 360, 72 etc, this would be for an encoder with 360 positions: $(512-360)/2 = \text{Excess } 76$. the code would go from 76 to 435, so that position 76 to 435 would only change one bit.

BCD code

In certain cases, the information processed by the system must be converted to decimal so that it may be more easily interpreted, this is the main reason why Binary Coded Decimal (BCD) exists. In BCD, each decimal number is directly coded in binary in order to represent the ten digits from zero to nine, which requires four bits, meaning that each decade needs four bits

Programmable optical absolut encoders

All essential encoder parameters are user-programmable in our programmable absolut encoders.

Available for singleturn and multiturn encoders in various mechanical options.

The programming enables the user to select the zero of reference, the number of positions per turn, up to 8192 points per turn (13 bits), the number of turns in the multiturn case, up to 4096 turns, rotation direction and output code: Binary, Gray, Excess Gra and BCD.

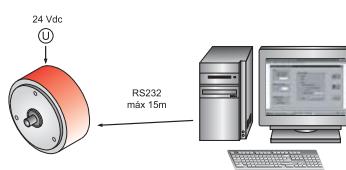

There are advantages, such as the possibility of electronic misadjustment and optimisation in mechanical systems that are subject to tolerances etc.

Since the same encoder can be installed in different applications and their specific programming assigned during the actual installation, this translates into savings in both stock and maintenance.

Programming the encoder

In order to program a hohner encoder, a PC is required, together with the programming software and the connection cable between the encoder and PC (the last two are supplied with the encoder).

The encoder is connected to a power supply (24vdc) and the communications cable is connected to

Misalignment permitted radial (blind hollow shaft)	± 0.3 mm	-
Weight aprox.	400 g ST, 500 g MT	1,2 kg ST, 1,3 kg MT
Operating temperature range	-10°C a +70°C	
Vibration	100 m/s ² (10Hz...2000Hz)	
Shock	1000 m/s ² (6ms)	
Consumption max.	100 mA (CS/HS), 150 mA (CM/HM)	
Power supply	10..30Vdc	
Interface	Parallel	
Electrical output	Push-pull, NPN, NPN Open Collector	
Configurable parameters (programmable series)	Direction, code, store, enable, reset, preset1, preset2	
Configurable parameters	Direction and reset	
Inputs	Opto-coupled	
Available codes	Binary, gray and BCD	
Max. points per turn	8192 positions (13 bits)	
Max. turns	4096 turns (12 bits)	
Linearity	$\pm 1/2$ LSB	
Radial and axial connection	2 metres cable or industrial connector	

ST: Singleturn MT: Multiturn

SINGLETURN ABSOLUT ENCODER

- Singleturn resolution up to 13 bits
- Protection class IP65 according to DIN 40050
- External diameter 58 mm
- Solid shaft (CS) and blind hollow shaft (HS)

Previous mounting and installation of the encoder is recommended to read the section "TECHNICAL CONSIDERATIONS".

SERIE E36 CM

MINIATURE SOLID SHAFT ABSOLUTE MULTITURN ENCODER

MECHANICAL SPECIFICATIONS

Materials	Housing: Aluminium Flange: Aluminium Shaft: Stainless Steel
Bearings	Ballraces
Bearings lifetime	1x10 ¹⁰ rev.
Maximum number of revolutions permitted mechanically	6000 rpm - Standard 10000 rpm - Upon request 12000 rpm (\leq 12 bits) - Upon request
Protection against dust and splashes according to DIN EN 60529	IP64
Rotor inertia moment	2 gcm ²
Starting torque at 20°C (68°F)	\leq 0,01 Nm
Maximum load permitted on axial shaft	20 N
Maximum load permitted on radial shaft	40 N
Weight aprox.	0,08 Kg
Operating temperature range	-40°C to +85°C - Standard -40°C to +105°C - Special Customer LN
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...2000Hz)
Shock according to DIN EN 60068-2-27	1000 m/s ² (6ms)
Axial or radial connection	2 meters cable (other cable lengths available on order)

ELECTRICAL SPECIFICATIONS

Interface	IBSS INTERFACE
Electronic output	RS422
Power supply (VCC)	4,75...30 VDC
Consumption	\leq 100 mA
Code	Binary
Protocol	IBSS-C
Singleturn resolution	up to 13 bits
Multiturn resolution	up to 24 bits
Absolute accuracy	\pm 0,35°
Relative accuracy	\pm 1,5 LSB
Max. load capability / channel	\pm 20 mA
"Low" signal level	< 0,8 VDC
"High" signal level	2 ... 5,5 VDC
Frequency	50 kHz...2 MHz
Short circuit protection	Yes
Protection polarity inversion	Yes

CONNECTION

	Cable 8x0,14 mm ² 95.0008052
GND	White
VCC	Brown
DATA+	Yellow
DATA-	Pink
CLK+	Green
CLK-	Grey
PRESET*	Red
DIR**	Blue

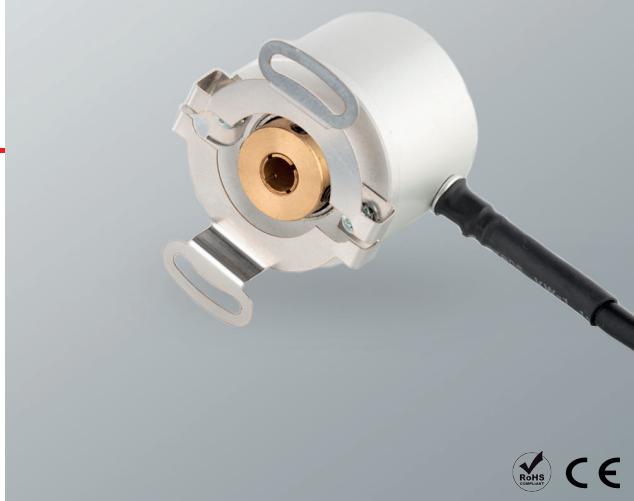

(*) Apply a 4,75...30 VDC pulse (more than 1 ms) to set the encoder to Zero and reboot the encoder (turn off and then turn on the power supply).

(**) Connect to 4,75...30 VDC to change direction from default. If this input is not used, it should be connected to GND in order to avoid interferences. The encoder must be always rebooted (turn off and then turn on the power supply) after switching.

SERIE CM26M

ABSOLUTE MULTITURN MAGNETIC ENCODER

MECHANICAL SPECIFICATIONS

Materials	Housing: Plastic / Bronze Shaft: Stainless Steel
Bearings	Sleeve bearing
Mechanical angle	Endless
Lifetime	> 100x10 ⁶ shaft rotating movements
Maximum number of revolutions permitted mechanically	100 rpm
Protection against dust and splashes according to DIN EN 60529	IP 40
Operational torque	0,1 ≤ M ≤ 0,6 Ncm
Maximum load permitted on radial shaft	1 N
Mounting parts (included)	Hexagonal nut, 14 mm + tooth washer
Torque nut assembly	≤ 3 Nm
Weight aprox.	0,3 Kg
Operating temperature range	-40°C to +85°C
Vibration according to DIN EN 60068-2-6	±1,5 mm / 20 g / 10...2000 Hz / 16 frequency cycles (3x4 h)
Shock according to DIN EN 60068-2-27	50 g / 11 ms / halfsine (3x6 shocks)
Radial connection	Flat ribbon cable (0,15 m)

ELECTRICAL SPECIFICATIONS

Measuring range	0...72000° (200 turns)
Independent linearity	±0.05 % (3600°)
Absolute linearity	±0.1 % (3600°)
Resolution	12 bits
Update rate	3 ms
Max. number of programming cycles	10.000
Output signal	0...10 V
Power supply	9...30 VDC 15...30 VDC
Power consumption (without load)	< 10 mA
Output load	≥ 5KΩ
Insulation voltage	1000 VAC (50 Hz, 1 min)
Insulation resistance	2 MΩ (500 VDC, 1 min)

(*) For detecting absolute position (> 360°) the sensor should not be turned more than 179° without supply voltage.

END (programming cable)	2
START (programming cable)	3
VCC	4
OUT	5
GND	6

GENERAL INFORMATION

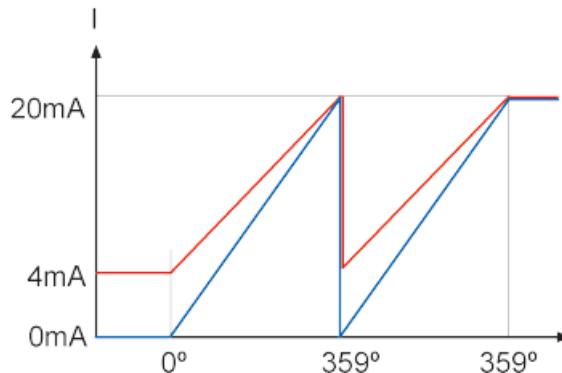

ANALOG

ABSOLUT AND PROGRAMMABLE ABSOLUT ANALOG ENCODERS

■ Analog interface

The analog interface has two outputs: one provides the absolut position measurement as a voltage (0/10v), and the other as a current (0/20mA or 4/20mA). Both outputs come from a singleturn absolut encoder with a 12bit resolution, with the 0 absolut position (0 degrees) havin a value of 0v at the V+ output and 4 or 0 mA at the I+ output.

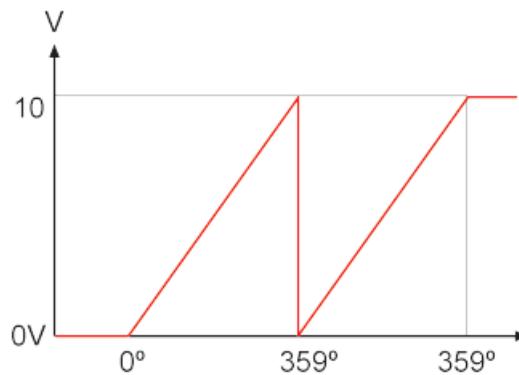

When the absolut position is 4095 (359 degrees) the V+ output will be 10v and the I+ output will be 20mA. These outputs consist of four wires (two per output): I+, I- and V+, V-, being I- and V- referenced internally to negative (GND), and thus forming two measurement loops. Depending on the measurement system implemented by the customer, one or the other output will be used (current or voltage).

■ Current output

Electrical specifications

Output form	0/20mA o 4/20mA
Resolution	Up to 12 bits (4096 positions) for 360°
Thermal stability	±20 ppm/°C
Update frequency	100KHz
Linearity error	0.07% of the active angle
R _{LOAD} máx.	(V _{IN} - 2 V)/20mA)
R _{LOAD} min.	150Ω

■ Voltage output

Electrical specifications

Output form	0/10V (Vcc min.=12V)
Resolution	Up to 12 bits (4096 positions) for 360°
Slew Rate	0.7V/us
Update frequency	100KHz
Linearity error	0.05% of the active angle
Load resistance	>5kΩ
Protection against shortcircuit	Yes

ABSOLUT ENCODERS ANALOG

- Interface analog current loop output 4..20mA, 0..20mA and 0..10 V voltage output
- Resolution 10 or 12 bits
- Solid or blind hollow shaft
- Protection class IP65 or IP67 according to DIN 40050
- Direction and range selectable
- Radial or axial connection, cable or connector output

GENERAL INFORMATION FIELDBUS

FIELDBUS ABSOLUT ENCODERS

■ PROFIBUS

Profibus DP is a digital communications network that connects and is useful as a communication network between industrial controllers and Input/Output devices. Each device is a node in the network and should be identified unmistakably. Profibus DO is a network in the form of "master-server" with a token bus that is compatible with multiple hierarchies and message prioritizations.

We can connect up to 32 elements (master or slave) in one sole network segment. If you wish to install more than 32 elements, repeaters should be used in order to interconnect the different segments. The network should be finished at the beginning and the end of each segment with an active bus termination.

The encoder presents a bus termination in the inside of it or an external one can be installed.

The following functionalities are integrated in the encoders

Profibus Hohner:

- Galvanic isolation of the bus with DC/DC
- Line Driver according to RS-485. max. 12MB

- Diagnosis led: Indication led of functioning state and the power supply led.
- Direction programmable by micro switches. The allowed value range is from 1...126. Each node number should be used one sole time in one network. During the initialization of the encoder, the micro switches are read by the firmware.
- The communication velocity is adjusted by the software. Normally the master of the system adjusts it. All of the modules in the same segment of the Profibus network should be adjusted to the same communication velocity.
- They can be programmed in accordance with the profile of the Profibus encoder in Class 1 and Class 2.

Configurable parameters:

- Rotation direction
- Scaling factor
Number of positions per turn and total resolution
- Preset value.
- Diagnosis mode.

■ DEVICENET

DeviceNet is a digital communications network that connects and is useful as a communication network between industrial controllers and Input/Output devices. Each device is a node in the network and should be identified unmistakably. DeviceNet is a network in the form of "producer-consumer" with a token bus that is compatible with multiple hierarchies and message prioritizations. DeviceNet can be configured to operate in the "master-slave" mode using "point to point" messages. DeviceNet supports the capacity of having a power supply integrated in its bus, which allows reducing the connection points

The following functionalities are integrated in the Devicenet Hohner encoders:

- We can have up to 64 nodes (0...63). Each Node Number should be used one sole time in one network. During the initialization of the devices the Node Number micro switches are read by the firmware.
- Galvanic isolation with DC/DC

- A Bus termination resistance is available and can be selected by the micro switch
- Communication modes: polled, cyclic and cos.
- Communication velocity selectable through micro switches: 125 kBits/sec, 250 kBits/sec or 500 kBits/sec.

Configurable parameters:

- Rotation direction.
- Scaling factor
Number of positions per turn and total resolution
- Preset.
- Diagnosis mode.

■ CANOPEN

CANOpen is a digital communications network that connects and is useful as a communication network between industrial controllers and Input/Output devices. Each device is a node in the network and should be identified unmistakably.

CANOpen is a network in the form of "producer-consumer" with a token bus that is compatible with multiple hierarchies and message prioritizations.

CANOpen can be configured to operate in the "master-slave" mode using "point to point" messages.

CANOpen supports the capacity of having a power supply integrated in its bus, which allows reducing the connection points

The following functionalities are integrated in the CANOpen encoders:

- We can have up to 64 nodes (0...63). Each Node Number should be used one sole time in one network.

During the initialization of the devices the Node Number micro switches are read by the firmware.

- A Bus termination resistance is available and can be selected by the micro switch
- Communication modes: polled, cyclic and cos.
- Communication velocity selectable through micro switches: 10...1000 kBits/sec

Configurable parameters:

- Rotation direction.
- Scaling.
Number of pulses per turn and number of turns
- Total resolution
- Preset.
- Offset

MECHANICAL SPECIFICATIONS

Materials	Housing: Aluminium Flange: Aluminium Shaft: Stainless Steel
Bearings	Ballraces
Bearings lifetime	55x10 ⁸ rev. (Clamping) [40 N / 110 N] 150x10 ⁸ rev. (Clamping) [40 N / 60 N] 85x10 ⁸ rev. (Synchro) [40 N / 110 N] 195x10 ⁸ rev. (Synchro) [40 N / 60 N]
Shaft diameter	6 or 10 mm
Maximum number of revolutions permitted mechanically	≤ 12000 rpm
Protection according to DIN EN 60529	IP65
Rotor inertia moment	≤ 30 gcm ²
Starting torque at 20°C (68°F)	≤ 0,03 Nm
Maximum load permitted on axial shaft	40 N
Maximum load permitted on radial shaft	110 N
Weight aprox.	470 g
Operating temperature range	-40°C to +85°C
Storage temperature range	-40°C to +85°C
Humidity	98% RH, not condensed
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...1000Hz)
Shock according to DIN EN 60068-2-27	1000 m/s ² (6ms)
Radial connection	2 x M12 Connector Mating connectors not included

INTERFACE

DeviceNet

Profile	CIP
Programming functions	Resolution, preset, complement, transmission mode (polled mode, cyclic mode, sync mode)
Manual functions	Address selector switch 0-99 and terminal resistor (with connection cap)
Transmission rate	150, 250, 500 kBaud
Interface cycle time	≥ 10 ms

ELECTRICAL SPECIFICATIONS

Output Driver	Transceiver (ISO 11898), Galvanically Isolated by Opto-Couplers
Power supply	10...30 VDC
Consumption	≤ 230 mA (10 VDC) ≤ 100 mA (24 VDC)
Power Consumption	≤ 2.5 W
Start time	< 250 ms
Singleturn resolution	up to 16 bits
Multiturn resolution	up to 14 bits
Accuracy (INL)	±0.0220° (14 – 16 bits) ±0.0439° (≤13 bits)
Code	Binary
Short circuit protection	Yes
Protection polarity inversion	Yes
EMC: Emitted interference	DIN EN 61000-6-4

SERIE CS10/CM10

SINGLETURN AND MULTITURN ABSOLUTE SOLID SHAFT ENCODER

MECHANICAL SPECIFICATIONS

Materials	Housing: Aluminium Flange: Aluminium Shaft: Stainless Steel
Bearings	Ballraces
Bearings lifetime	55x10 ⁸ rev. (Clamping) [40 N / 110 N] 150x10 ⁸ rev. (Clamping) [40 N / 60 N] 85x10 ⁸ rev. (Synchro) [40 N / 110 N] 195x10 ⁸ rev. (Synchro) [40 N / 60 N]
Shaft diameter	6 or 10 mm
Maximum number of revolutions permitted mechanically	≤ 12000 rpm
Protection according to DIN EN 60529	IP65
Rotor inertia moment	≤ 30 gcm ²
Starting torque at 20°C (68°F)	≤ 0,03 Nm
Maximum load permitted on axial shaft	40 N
Maximum load permitted on radial shaft	110 N
Weight aprox.	475 g
Operating temperature range	-40°C to +85°C
Storage temperature range	-40°C to +85°C
Humidity	98% RH, not condensed
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...1000Hz)
Shock according to DIN EN 60068-2-27	1000 m/s ² (6ms)
Radial connection	3 x Cable Gland (Terminal Box) 3 x M12 Connector Mating connectors not included

INTERFACE

Profile	DPV0, DPV1 and DPV2 Class 2 (EN50170 + EN50254)
Diagnostics	Memory
Programming functions	Resolution, gearing factor (physical resolution), velocity scaling + filter, preset (zero point), counting direction, limit switches , node number, teach-in, diagnosis
Manual functions	Address selector switch 0-99 and terminal resistor (with connection cap)
Features	Round axis
Transmission rate	≤ 12 Mbaud
Interface cycle time	≥ 1 ms

ELECTRICAL SPECIFICATIONS

Output Driver	Profibus Data Interface, galvanically isolated via opto-couplers
Power supply	10...30 VDC
Consumption	≤ 115 mA (10 VDC) ≤ 50 mA (30 VDC)
Power Consumption	≤ 1.5 W
Start time	< 1 s
Singleturn resolution	up to 16 bits
Multiturn resolution	up to 14 bits
Accuracy (INL)	±0.0220° (14 – 16 bits) ±0.0439° (≤13 bits)
Code	Binary
Short circuit protection	Yes
Protection polarity inversion	Yes
EMC: Emitted interference	DIN EN 61000-6-4
EMC: Noise immunity	DIN EN 61000-6-2
MTTF	13,5 years

GENERAL INFORMATION

SmarSens

INTRODUCTION

SmarSens is a range of Hohner encoders that give a single encoder the possibility of absolute and incremental signals. Its compact and robust design with numerous communication interfaces available make SmarSens a product that adapts to the real needs of the client. The implementation through an OptoASIC provides a high degree of optoelectronic integration. The range of SmarSens encoders is applicable to a great variety of applications such as wind turbines, elevators, etc.

INCREMENTAL SIGNALS / ABSOLUT SIGNALS 1Vpp

	Amplitude Vpp	Offset / Asymmetry	Amplitude ratio A/B	Phase A to B
A, nA, B, nB C, nC, D, nD	0,5±20%	2,5±10%	-	-
A - nA	1±20%	$ A_{as}-A_{ai} /(2*(A_{as} + A_{ai})) \leq 0.065$	0.8 to 1.25	$90^\circ \pm 10^\circ$
B - nB	1±20%	$ B_{as}-B_{ai} /(2*(B_{as} + B_{ai})) \leq 0.065$		
C - nC	1±20%	$ C_{as}-C_{ai} /(2*(C_{as} + C_{ai})) \leq 0.065$		
D - nD	1±20%	$ D_{as}-D_{ai} /(2*(D_{as} + D_{ai})) \leq 0.065$		
Z, nZ	0,5±20%	2,5±10%		
Z - nZ	1±20%			

A: Incremental cosinus signal
 B: Incremental sinus signal
 C: Absolute cosinus signal
 D: Absolute sinus signal
 Z: Index signal

Aas, Bas, Cas, Das: Channel A, B, C and D, upper peak voltage amplitude
 Aai, Bai, Cai, Dai: Channel A, B, C and D, lower peak voltage amplitude
 Aat, Bat, Cat, Dat: Channel A, B, C and D, peak to peak voltage amplitude

Sinusoidal outputs are a very useful system to make interpolations that give high resolution to the single turn part. There are incremental signals, A and B, the signal A (cosine) moves in front of B (sine) 90° degrees, and there are absolute signals, C and D, the signal C (cosine) moves in front of D (sine) 90° degrees. The median value of signals A, B, C, D, nA, nB, nC and nD, is 2.5 Vdc. The nA/nCOS_inc signal is 180 degrees from A/COS_inc, just nB/nSIN_inc is to B/SIN_inc, like nC/COS_abs is to C/COS_abs and D/SIN_abs is to D/SIN_abs. The peak to peak of the sinusoids is from 0.4 to 0.6 Vpp. These sine and cosine signals, in the control input, adapt the interpolate signals to 1 Vpp in the A-nA, B-nB, C-nC and D-nD.

SSI INTERFACE

In many cases, the data transmitted from one system to another are exposed to magnetic fields and noise. When using a standard interface like the RS-422, the effects produced by these disruptions are reduced. The SSI "Synchronous Serial Interface" is an industrial output standard that only needs 4 lines to carry out data transmission. This transmission system for absolute encoders provides diverse advantages in comparison to the traditional parallel transmission and asynchronous serial methods:

- Inferior number of components.
- Easy wiring system.
- Data transmission between the encoder and the receiver are controlled by the receiver's clock signal.
- High transmission speeds based on distance and data block to be transmitted.

The SSI interface requires a Master (for example, a SSI data acquisition card) and a Slave (the encoder) for communication.

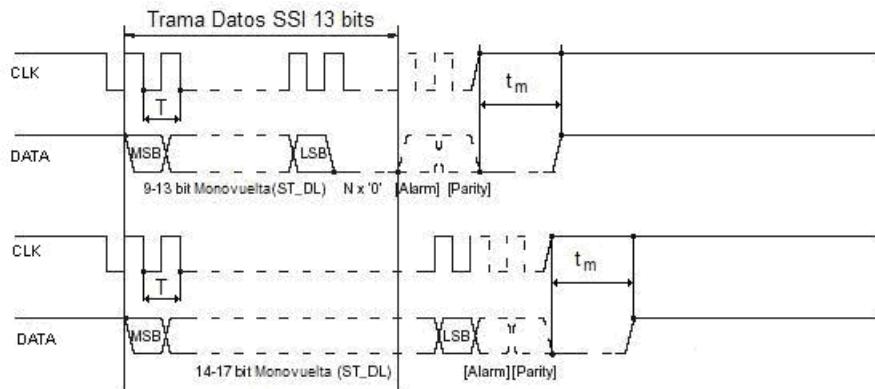

The Master generates the CLK and their inverted signals, while the slave generates the DATA and their inverted signals. The communication is one-way. When in idle mode, CLK and DATA have the value "1" (high value). In the data acquisition mode, the Master generates a burst of pulses of the same period T and the Slave will respond with an information bit for each pulse also with a T duration. The CLK and DATA signals are synchronized. To start the transmission, the Master will set the CLK signal to "0" (low value) and then send the pulses. To end the block, the master will maintain during tm seconds the CLK signal at "1" and then the SLO signal will also become "1". At this point, the Master can interrogate the Slave again. The bits sent during a burst of pulses by the Master are called a block. In the SSI, the standard size of the blocks is 13 or 25 bits, although other sizes are possible.

GENERAL INFORMATION

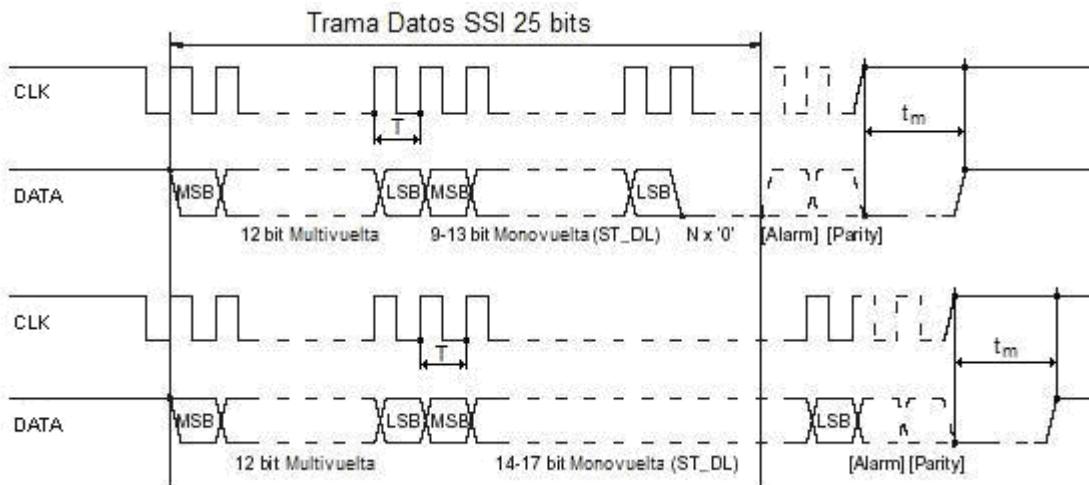

SmarSens

In the single-turn mode, the information is transmitted in SSI blocks of at least 13 standard bits. If the single-turn resolution is higher than 13 bits, the block will last n bits, with n being the number of single-turn resolution bits. In the serial delivery, the first bit of data transmitted deals with the most significant bit (MSB) of the block and the last one with the least significant bit (LSB). If the resolution is less than 13 bits, the remaining space up to the 13 bits is filled with zeros. In the SSI1 Figure, you can see the block sent when the resolution is lower than 13 bits and also when it is higher.

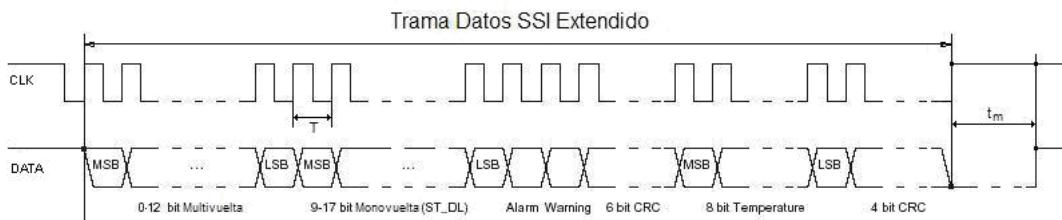

In all the SSI blocks, in single-turn, multi-turn, or extended modes, you can add the Alarm and Parity bits activating the relevant configuration bits. By default, these bits are not sent in the block.

In the multturn mode, the information is transmitted in standard SSI blocks of 25 bits for singleturn resolutions of less than 14 bits. The 12 bits of the multturn part are transmitted at the beginning, starting from the most significant bit to the least. Next, the singleturn part bits are transmitted, starting from the most significant bit of the block. If the resolution singleturn is inferior to 13 bits, the bits left over from the block will become zeros. If the singleturn resolution is higher than 13 bits, the size of the block will be $25+(n-13)$ bits, where n is the number of singleturn resolution bits. In the SSI2 figure, you can see the case for a single-turn resolution equal to or less than 13 bits and the case for resolutions higher than 13 singleturn bits.

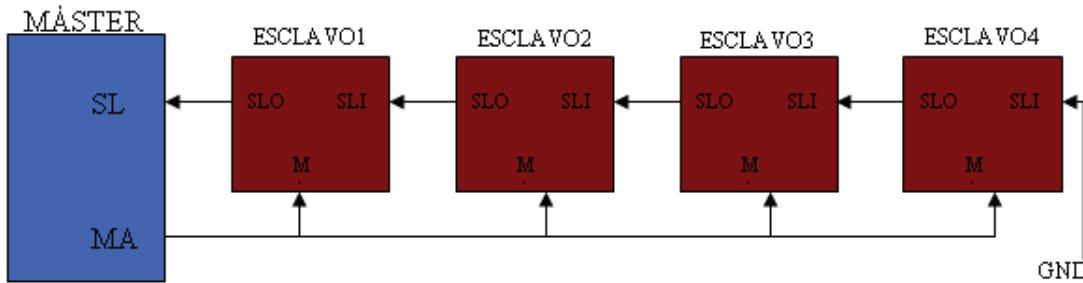

In the SSI extended mode, the length of block is variable, depending on the information sent. First, it transmits the data of the multturn part, with a variable length of 0 (only single-turn) or 12 bits, from the most significant to the least significant bit. Next, the single-turn part also transmits from the most to the least significant bit. The length can vary depending on the resolution of the part single-turn, from 10 bits to 14 bits. Once transmitted, the least significant bit will send the Alarm and Warning bits. As a method to detect errors in the transmission, a 6 bit CRC will be generated, with the 43h polynomial, of the information processed up to that point (multiturn+singleturn+Alarm+Warning) that will be transmitted after the Warning bit. Next, it will send the information on the sensor temperature encapsulated in 8 bits, and lastly, it will calculate a CRC, with the 4 bits 13h polynomial, that will close the block to transmit, for the 8 bits of sensor temperature data. In the SSI3 figure, you can see the format of the extended SSI block.

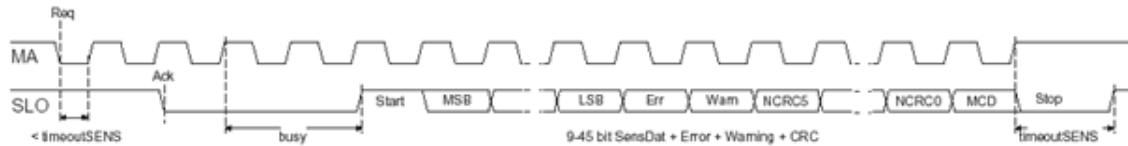

In all cases, the value of T should be from $1\mu s$ to $10\mu s$, and t_m should be higher than $40\mu s$. To correctly operate, you should set up the encoder configuration record to allow SSI-BIIS compatibility..

■ BISS INTERFACE

This multipoint serial communication standard is open and simple to use. It is similar to the SSI but the control (or master) interacts with the sensors programming the different parameters for each sensor, as well as reading its different status record. For this reason, the BiSS "Bidirectional interface Serial Synchronous", unlike the SSI, is bidirectional. The communication can be from 17KHz to 4MHz frequencies under ideal conditions. For longer sensor-control distances, this frequency gradually diminishes. The maximum number of slaves for each master, like this encoder, that can be connected to a control is four. The BiSS1 figure graphically shows the connection of four slaves with the master. The last slave of the chain has to have the SLI to GND input. Physically, this means that SLI+ should connect to GND and SLI- to 5V. When the encoders interact with other slaves that are not encoders, they must be located on the chain with the lowest identifiers, starting from one. The use of more than one slave with the master implies that the maximum work frequency of the encoder is divided by the number of slaves connected, due to the time that they take in transmitting data to other slaves.

The encoder data reading by the Master (MA) is always one-way, using PWM codification and following the BiSS2 figure format. The Master starts the communication with start bit (start, lowering the signal from "1" to "0"), next, it waits for the encoder's answer, also called slave (SLO) that, before the synchronism signal or clock sent by the master, begins to send data after a start signal. The encoder starts to send data from the most to the least significant bit, and then sends the Error, Alarm and CRC bits of 6 0x43h polynomial generator bits. Lastly, it sends a data bit called a multi-block (MCD). The size of the block depends on the encoder's resolution. After each block, the encoder's position is given

The multi-cycle or multi-block bit does not have any purpose in a single block, but it does when in various blocks, and provides the information on the encoder's temperature.

This temperature is encoded into 8 bits and each bit is transmitted in a different data reading block of the encoder. Also, the entire multi-block cycle includes a start bit to indicate the MCD start, next the 8 bits, the 4 bit CRC with a 0x13h polynomial generator and lastly, a stop bit. Overall, the encoder's temperature reading takes up 16 blocks of data reading. In the BiSS3 figure, you can see the details of this type of transmission.

■ EXTERNALLY CONFIGURABLE PARAMETERS AND DIAGNOSIS LED (OPTIONAL)

Unscrewing the top of the rear cover, you will find the reset/preset button to position the absolute value of the encoder to a known value. In the case of a SSI encoder, pushing the button will update the position to 0 (Reset). In the case of a BiSS encoder, when we push the button, we can update the position to any previously programmed value (Preset).

You can also change the direction using the external nDIR input, that when we connected to the GND inverts the encoder's default rotation direction.

The diagnosis LED can also be reached by unscrewing the top. When the encoder and the communication with the master are working correctly, the LED is green. The led is red (in SSI mode) when the communication fails with the master, when the lamps stop working, when the communication fails with the multi-turn part or when the encoder exceeds the recommended work temperature values.

In the BiSS communication mode, the diagnosis LED is configurable with the 0x30h record (error mask) where we can choose what are/is the error/s that we are interested in detecting.

When there is an error in the encoder (diagnosis LED is red), the 8 bit record with direction 0x68h specifies the reason for the error, according to the active bit. The table of errors is :

Bit7	Operation temperate exceeded
Bit6	Error external system sent to NERRR
Bit5	Error in the serial interface
Bit4	Invalid position or data conversion is not ready
Bit3	Configuration error EEPROM interface
Bit2	Error in the pitch codification
Bit1	Error in the multi-turn part
Bit0	Failure in the LED power control

The "Error in the pitch codification" usually causes problems with the disc (breakage, condensation or dirt) or mechanical overload (excess in the rotation speed).

The "Failure in the LED power control" originates when there are problems with heat, dirt, condensation or fatigue.

TECHNICAL SPECIFICATIONS

Materials	Housing: Aluminium Flange: Aluminium Shaft: Stainless Steel
Bearings	Ballraces
Bearings lifetime	1×10^{10} rev.
Housing fixing	Expanding coupling 90.1101 (assembled) Flexible flange 90.1027 (assembled)
Permitted misalignment	± 0.5 mm axial (90.1101) ± 0.5 mm axial, ± 0.3 mm radial (90.1027)
Maximum number of revolutions permitted mechanically	6000 rpm
Protection against dust and splashes according to DIN EN 60529	IP54
Rotor inertia moment	$\leq 3 \times 10^{-6}$ Kgm ²
Starting torque at 20°C (68°F)	≤ 0.02 Nm
Maximum load permitted on axial shaft	40 N
Maximum load permitted on radial shaft	60 N
Weight aprox.	0,4 Kg
Operating temperature range	-20°C to +80°C
Vibration according to DIN EN 60068-2-6	100 m/s ² (10Hz...2000Hz)
Shock according to DIN EN 60068-2-27	1000 m/s ² (6ms)
Consumption	≤ 90 mA
Power supply	5 VDC $\pm 10\%$
Electronic incremental output	SIN/COS, 1 Vpp $\pm 20\%$
Incremental resolution	2048 SIN/COS
Electronic absolute output	SIN/COS, 1 Vpp $\pm 20\%$
Absolute resolution	1 SIN/COS in 360°
Frequency (-3 dB)	≤ 200 kHz
Signal offset	2,5 VDC
Helicoidal cable	2 meters cable (other cable lengths available or connector mounted at the end of the cable, upon request) or 30 cm cable + connector D-Sub 15p

OVERVIEW MAGNETIC SENSOR

MSL

Accuracy $\pm 40 \mu\text{m}$
Polar pitch 5+5
Resolution up to 5 μm
IP67

MSM

Accuracy $\pm 15 \mu\text{m}$
Polar pitch 2+2
Resolution up to 1 μm
IP67

MSH

Accuracy $\pm 10 \mu\text{m}$
Polar pitch 1+1
Resolution up to 0,5 μm
IP67

General Information

Incremental magnetic sensors for linear measurement of the MS series allow non-contact, highly precise and real-time measurements. The measuring group is made up of two parts: a sensor that incorporates the electronic capture/an output driver and a polarized magnetic strip in a constant period.

Use is very simple. It consists in moving the sensor without making contact along the strip allowing lengths over 50 metres.

Series of MS magnetic sensors is made up of 3 models, depending on the precision required, with the possibility to incorporate reference signals externally or to the magnetic strip.

Sensor's high IP allows installation in most industrial applications and is ideal for outdoor use.

Range of MS sensors offers an economic and robust alternative to other lineal measurement systems.

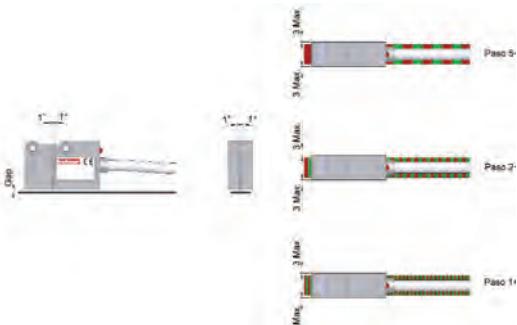

Sensor assembly

The sensor can be mounted in any position, keeping the active side, marked by arrows, toward the surface of magnetic strip. Once mounting is carried, place cables and move manually the sensor in the entire run, in order to ensure it can freely slide without any obstacle.

Check that aligning tolerances between sensor and magnetic strip are respected along the whole run. Each positioning error must be corrected.

Dimension of any brackets or supporting arms have to be conveniently calculated; it must be avoided any kind of their bending.

- Proceed to fix magnetic sensor using the M4 threaded holes.
- As an alternative you can use them as passing holes for TCEI M3x18 screws.

Fixing of magnetic band

Magnetic band can be fixed on any kind of non-magnetic surface.

For a better protection of magnetic band from shavings, liquid sprinklings, powder, etc. we suggest to always use the metal sheet cover PS, already equipped with a double-sided adhesive tape or the aluminium support AP.

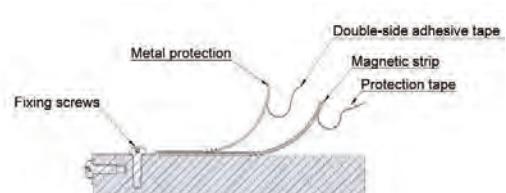

The best gluing temperature is between 20 and 30 °C; avoid making it when temperature is below 10°C.

In case of stocking magnetic strip MP200 at a lower temperature than the machine, it is advisable to wait for some hours before gluing. The adhesion of glued parts is completed after at least 48 hours.

Make the gluing of magnetic strip as follows:

- Clean carefully the fixing surface from oil, fat or any kind of dirt, using trace-free solvents.
- Raise up few centimetre of adhesive protection and place magnetic strip, lightly pushing on the initial adhesive zone.
- Proceed with the placing of the strip, removing progressively the adhesive protection and making a uniform pressure. If possible, use a small manual roller.
- Proceed as above to glue the stainless steel cover tape on the magnetic strip, after an accurate cleaning of the surface.
- Use the exceeding part of cover tape for mechanical fixing and "earth" connection of the structure by means of screws TC M3x8.

In order for the system to be more precise, the magnetic strip should be 80 mm (40 mm on each side) longer than the maximum travel of the machine: L =effective travel + 80 mm. The tape should be centred along the limit switch.

LINEAR MEASURING MAGNETIC SYSTEM

■ Electrical connections

Sensor is set up with a Line-Driver output. If the reading device cannot read complementary signals, it is necessary to isolate the unused wires one by one. It is important to note that the connection of the unused wires can damage the sensor and it does not guarantee its immunity from interferences.

Make connection when power supply is switched off, and also batteries (when present) are excluded.

Avoid allocating the cable next to any devices which may cause electromagnetic interferences (motors, solenoid valves, inverters).

If some interferences are detected, act on the source of disturb using EMC filters.

If cable extensions are needed, it is necessary to use shielded cables with a section at least 0.35 mm² for power supply and 0.14 mm² for signals.

Verify the correct connection and the continuity of the shield which has to be connected to an earthing node with very low impedance.

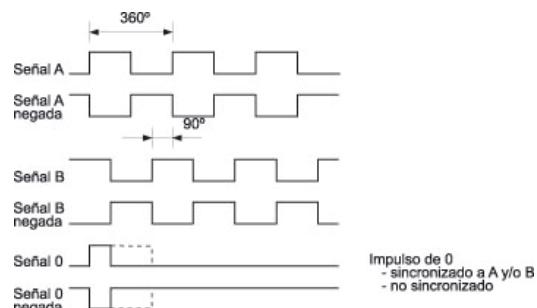

Sensor is supplied with a standard cable 2m long, longer lengths can be required.

To balance Line-Driver output, you have to use the following resistance:

- 5V RL=120Ω
- 12V RL=350Ω
- 24V RL=1000Ω

Respect the minimum cable's winding radius of 60mm.

For applications where the max speed reaches more than 1m/sec, the use of a "special cable", suitable to continuous movements, is indispensable.

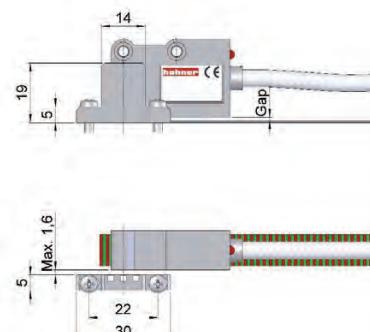

■ Mounting external zero

The sensor allows the detection of external reference points as well as those included on the magnetic strip (special order). This gives the measurement system the position references necessary for most applications.

The external reference signal is received by installing a magnet (EC) or magnetizing the strip at the desired position(s).

For the installation of the external zero reference (magnet) proceed as follows:

- Both sensor and magnetic strip have to be previously fixed to the machine, in their final position.
- Place the magnet where you need the zero position and move it around 4 mm, until the index red led turns on.
- Place the base of the magnet parallelly to the magnetic strip, at a distance of about 1mm from the sensor. Make the notch, located on the upper part of the magnet, roughly correspond with the vertical one on the body of the sensor.
- Mark on the machine the position of M3 fixing holes of magnet.
- Drill the fixing holes and tighten the magnet by 2 TC M3x12 screws, keeping the active part (magnets) toward the sensor. The slots permit a displacement, parallelly to the magnetic strip, in order to get an accurate positioning of magnet.
- Make a working test in both ways of moving.

■ Resistance to chemical agents and maintenance

LOW-IMPACT AGENTS

Formic acid, lactic acid, formaldehyde 40%, gliceryne 93°C, hexane, iso-octane, linseed oil, cotton oil, soybean oil, mineral oil.

MEDIUM-IMPACT AGENTS

Acetylene, acetone, acetic acid, oleic acid, stearic acid 70°C, seawater, ammonia, gasoline, ether isopropilic, petroleum, vapor.

STRONG-IMPACT AGENTS

Nitric acid, benzene, dimethylbenzene, tetraethyl furan, nitrobenzene, solvent, toluene, carbon tetrachloride, turpentine, trichlorethylene.

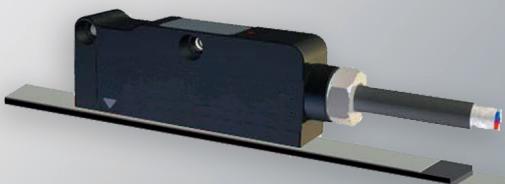

The band and sensor do not need any particular maintenance. An accurate installation, conforming to mounting instructions, and a correct use are sufficient to get a qualitative stability.

In case of malfunctioning please contact the manufacturer for repairing or changing of faulty components. Verify again all mounting tolerances whenever it happens something which can modify the correct alignment of the system.

In order not to compromise the precision of the strip, do not stress it mechanically. Strip has to be rolled always in the same way (active part toward outside), with a diameter not less than 260 mm.

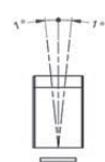

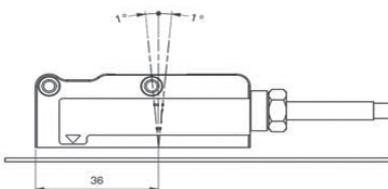

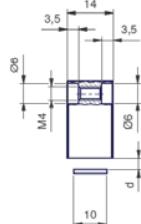

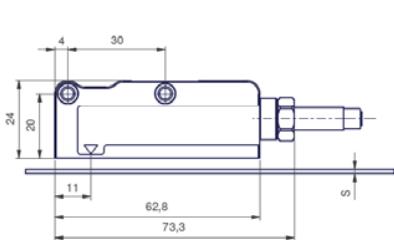

SERIE MSA

ABSOLUTE LINEAR MEASURING MAGNETIC SENSOR

Linear measurement system Magnetic Absolute Vibration and shock resistant IP67

- Linear magnetic sensor, with direct reading of the absolute position
- Magnetic detection without contact
- High speed serial interface
- Easy assembly; Wide alignment tolerances
- Resolution 10 µm
- Accuracy ±15 µm
- Pole pitch 2+2
- Protection class IP67
- Warning indication through LED
- Connection by cable (other cable length available)

SERIE MSA

ABSOLUTE LINEAR MEASURING MAGNETIC SENSOR

SENSOR SPECIFICATIONS

Absolute resolution	10 µm
Accuracy	±15 µm
Repeatability	±1 increment
Signal period	2 mm
GAP, distance sensor/band (d) see previous table	0,3 to 1 mm
Measuring length	up to 30 m
Max. traversing speed	300 m/min
Protection class (EN 60529)	IP67
Operating temperature range	0°C to +50°C
Storage temperature range	-20°C to +70°C
Humidity	100% not condensed
Vibration (EN 60068-2-6)	200 m/s ² (55...2000 Hz)
Weight	80g
Axial connection	2 meters cable (other cable length or radial output available, upon request)

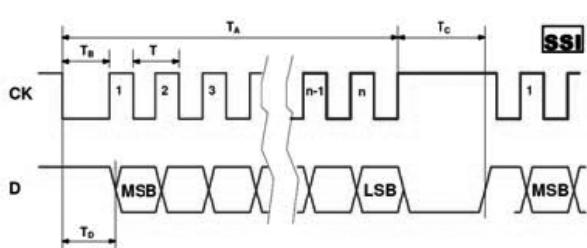

OUTPUT SIGNALS

Interface	SSI Gray
Clock frequency	0,1...1,2 MHz
n	Position bit* = 24 bit
T _c	12...45 µs
Power supply	5...28 VDC ±5%
Current consumption	150 mA max (Z=120Ω)
Length of cable allowed	20 m
Short circuit protection	Yes
Protection polarity inversion	Yes

Reading through positioning sensor based on magneto resistance, with AMR effect (Magnetic Anisotropy).

(*) The number of bit transmitted is different for other resolutions. See values table in MSA reference manual, section 8.

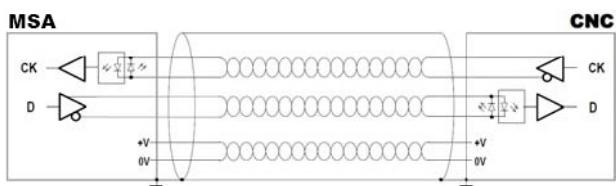

CONNECTION

	Cable 2x2x0,25+2x0,25 mm ²
GND	White
VCC	Brown
D+	Pink
D-	Grey
CK+	Green
CK-	Yellow
Shield	Shield

The cable is suitable for continuous movements.

The cable's bending radius should not be lower than 70 mm.

In case of cable extension, it is necessary to guarantee:

- > The electrical connection between the body of the connectors and the cables shield.
- > Ensuring a minimum power supply of 5 V to the sensor, the maximum cable length can be extended to 50 m.

Maximum length	30 m
Thermal expansion	$10,5 \times 10^{-6} \text{ }^{\circ}\text{C}^{-1}$ Tref: $20^{\circ}\text{C} \pm 0,1^{\circ}\text{C}$
Bending radius	≥ 130 mm
Operating temperature range	0°C to +70°C
Storage temperature range	-20°C to +80°C

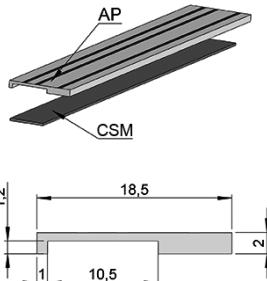

ACCESSORIES

PS: Cover for band protection

Stainless steel cover for protection.
To be placed in the magnetic band. (10 mm width - 0.3 mm thickness).

AP: Aluminium support

It is not possible to use the support AP if the magnetic band is already covered by PS band protection.

INSTALLATION AND HANDLING

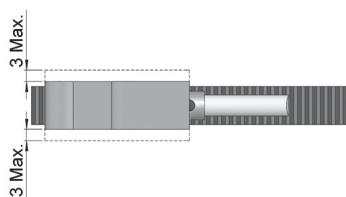

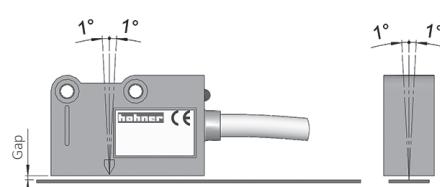

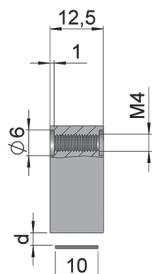

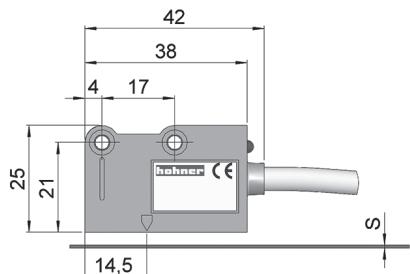

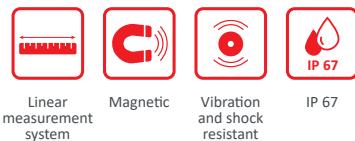

1. Degrease the surface you want to place the magnetic band by using alcohol and dry it carefully.
2. Place the band and keep it aligned with the reader head ensuring the magnetic part is just next to the sensor.
3. Place the cover PS or the support AP, if provided.
4. The max. adhesion will be achieved after 48 hours from sticking.
5. Keep other magnetic parts clear from the tape.
6. Store and roll up the tape keeping the magnetic strip on the outside, in order to avoid tensions.

DIGITAL READOUT WITH MAGNETIC SENSOR

BAND SPECIFICATIONS

Pole pitch	2+2 mm
Accuracy at 20°C	$\pm 30 \mu\text{m}/\text{m}$
Width band	10 mm
Thickness band	1,3 mm
Maximum length	50 m
Thermal expansion	$10,5 \times 10^{-6} \text{ }^{\circ}\text{C}^{-1}$ T ref = $20^{\circ}\text{C} \pm 0,1^{\circ}\text{C}$
Bending radius	≥ 130 mm
Operating temperature range	0°C to 70°C
Storage temperature range	-20°C to 80°C

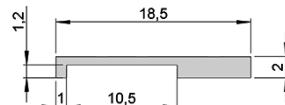

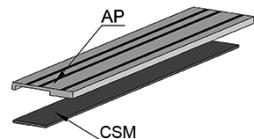

ACCESSORIES

PS: Cover for band protection

Stainless steel cover for protection.
To be placed in the magnetic band. (10 mm width - 0.3 mm thickness).

AP: Aluminium support

It is not possible to use the support AP if the magnetic band is already covered by PS band protection.

INSTALLATION AND HANDLING

1. Degrease the surface you want to place the magnetic band by using alcohol and dry it carefully.
2. Place the band and keep it aligned with the reader head ensuring the magnetic part is just next to the sensor.
3. Place the cover PS or the support AP, if provided.
4. The max. adhesion will be achieved after 48 hours from sticking.
5. Keep other magnetic parts clear from the tape.
6. Store and roll up the tape keeping the magnetic strip on the outside, in order to avoid tensions.

WARNING

WHAT TO AVOID

1. All mechanical reworks (Cutting, drilling, face milling a.s.o.).
2. All mishandling.
3. Impacts and external stress.
4. Avoid other magnetic fields.

ENCO-METER EM4

EXTENDIBLE CABLE MEASUREMENT SYSTEM

TECHNICAL SPECIFICATIONS

MODEL	EM4
<i>Reference</i>	90.1404 / 90.1404.FX
Travel	200 mm ±0,06 / per turn
Cable	Ø 0,61 stainless steel AISI316 (structure 19 x 7 + 0)
Measurement range, up to (mm)	4000
Maximum cable extension (mm)	4010
Minimum cable static tension	3 N - Standard 6 N - Special customer AV
Maximum cable static tension	8,9 N - Standard 18 N - Special customer AV
Maximum extension acceleration	35 m/s ² - Standard 30 m/s ² - Special customer AV
Maximum recovery acceleration	10 m/s ² - Standard 20 m/s ² - Special customer AV
Maximum speed	1 m/s
Protection against dust and splashes according to DIN EN 60529	IP51

(*) Other types of cables are possible on special order.

FLEXIBLE ACCESSORY (FX)

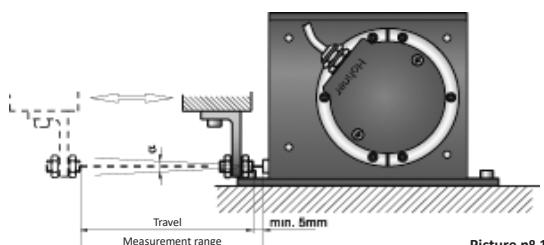

ENCO-METERS with flexible accessory FX (90.1404.FX, 90.1808.FX, 90.1810.FX) allow a misalignment of the extendable cable up to 45°.

ANODISED OPTIONS

+ **Special Customer BF:** 5 microns anodised housing for using in outdoor environments.

+ **Special Customer BD:** 20 microns anodised housing protected against the aggressive effect of the saltwater air.

INSTALLATION

ENCO-METER units are secured to a flat machine surface by means of three or four M4 screws. The cable must be correctly aligned and under no circumstances must it exceed the measurement range.

Special customer AW for inverted caps.

EM 90.1404: $\alpha < 2^\circ$ | EM 90.1404.FX: $\alpha < 45^\circ$

OUTPUT DEVICES

We can also supply the draw wire system already coupled to an electronic output device that could be an incremental encoder, absolute encoder or potentiometer.

ABSOLUTE OR INCREMENTAL ENCODER

If it is required to obtain a determined resolution "r" (mm per pulse) in the case of using an absolute or incremental encoder, the number of encoder pulses (n) will be:

$$n = \frac{D}{r} \quad (D \text{ is ENCO-METER travel in mm})$$

POTENTIOMETER

Using a potentiometer, an output "r" ratio (in Ω per mm) is obtained in accordance with:

$$r = \frac{R}{D \cdot n} \quad (R \text{ is the rated resistance and } n \text{ is the maximum number of turns})$$

As standard, we have potentiometers of $R = 10\text{K}\Omega$ and $n = 10$ turns. It must be taken into consideration that the mechanical travel of the potentiometer may limit the ENCO-METER measurement range.

i Electronic output devices that are delivered coupled to an ENCO-METER have an orientation of 45°. See Installation picture n° 1.

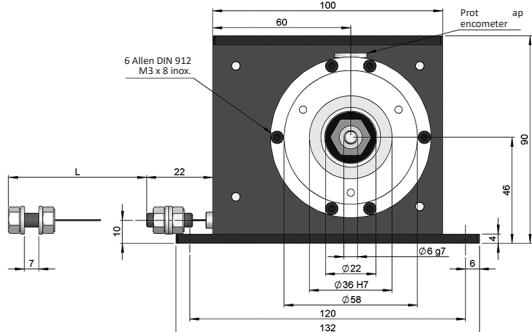

i If devices are not supplied assembled, we recommend mounting the sensor on the ENCO-METER without the seal.

ELECTRONIC DISCRIMINATOR

90.8600

ELECTRONIC DISCRIMINATOR FOR ENCODERS

- A/B signal discriminator
- Opto-isolated Push-Pull (HTL) Inputs
- Outputs Push-pull (HTL)
- Low consumption 70mA (without load)
- Power supply 10..24v
- Protection class IP 20
- Rapid assembly on a DIN rail

MECHANICAL SPECIFICATIONS

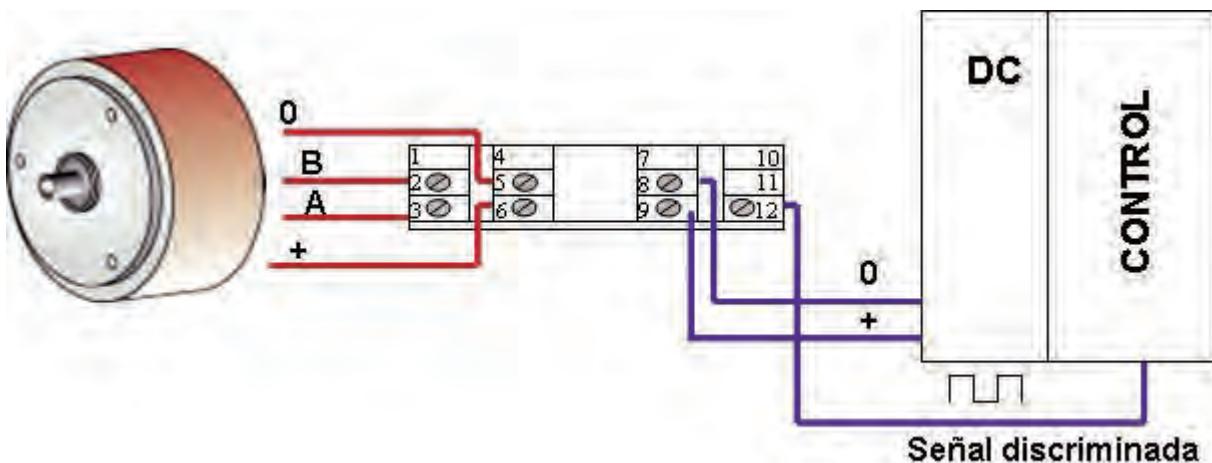

Input channels	A/B
Input signal type	Push-Pull
Input signal level	10..24v
Frequency	200 KHz
Passive filter	250 KHz
Phase displacement of input signal	90° ±25%
Output channels	A/B/direction
Output signal type	Push-pull
Output signal level	10..24v
Intensity of the outgoing load	30 mA per channel
Power supply	10..24v
Intern consumption	70 mA without load
Power supply encoder output	10..24v
Connection type	Pitch of the connection strip screw 5,08
Max.conductor sections	Max 2,5 mm ²
Protection against dust and splashes according to DIN 40050	IP 20
Relative humidity	85%
Operating temperature range	-10°..+70°C
Assembly	DIN Rail in 50022
Weight	100 gr
Housing	Grey polycarbonate UL94

MODULE DESCRIPTION

This digital discriminator takes advantage of the two encoder A and B channels, in order to refuse the possible noise or rebounds of the encoder. According to the direction in which the encoder turns, the discriminator captures one of the two signals (A or B), which will be the main signal and the other one will be the validation

signal. In this manner, there will always be a margin of 90 degrees in order to absorb and eliminate all of the rebounds and noises that may appear on the main signal. In this manner, if the encoder turns in one direction, the output signal will be A, and if it turns in the other direction, the output signal will be B.

Assembly	DIN Rail in 50022
Weight	100 gr
Housing	Grey polycarbonate UL94

MODULE DESCRIPTION

Especially designed module for applications where automatic up/down inputs are lacking. The digital direction detector takes advantage of the two channels of encoder A and B for generating a DIR output signal. According to the direction in which the encoder turns, channel A will advance by 90° to B or vice versa. In the first case, the DIR output will be a 0. In the second case,

where channel B advances on channel A, the DIR output will be a 1. Apart from the DIR output, the A and B input signals are digitalised and regenerated at the Aout and Bout respectively. The output driver for the three signals (Aout, Bout and DIR) is a 10-24V Push-Pull.

Assembly	DIN Rail in 50022
Weight	100 gr
Housing	Grey polycarbonate UL94

MODULE DESCRIPTION

This converter takes advantage of the differential signals referring to each channel (A/An yB/Bn) of the encoder for generating two outputs, A and B. Each one of these outputs will be the result of the A-An and B-Bn operation respectively, modifying the negative levels to 0 volts. Furthermore, the inputs have a 259 KHz filter for high fre-

quencies in order to absorb noise. The output driver for the two signals (Aout, Bout) is a 10-24V Push-Pull. This system is very useful when you want to have quality signals (A,B) in environments with high electromagnetic interference and wiring distances, but at the same time you want to save on control inputs.

FLEXIBLE COUPLINGS

Coupling importance

A large number of mechanical installations involve the problem of transmitting movement between the machine shafts. The coupling is the simplest manner of achieving this transmission since it works by joining the two ends of these shafts, thus transmitting rotation from one to the other. Not only does correct equipment operation depend on good resolution of the transmission problem, but also the useful lifetime of the encoders or coupled machines.

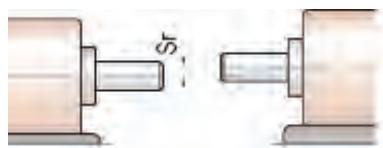

Selection

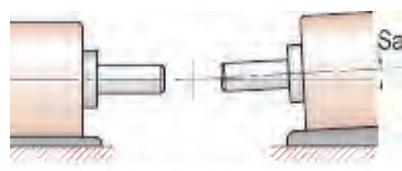

Coupling selection must be a compromise between factors, such as cost, available installation space, the required duration and transmission performance, which must satisfy requirements, such as:

Absorption of shaft misalignment and loads

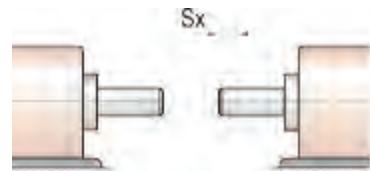

Due to dimensional errors inherent in all mechanical installations, the shafts to be installed will maintain certain positional differences or "misalignment" between the two and this will hinder the transmission of movement. This misalignment may be axial, radial or angular.

Radial misalignment

Angular misalignment

Axial misalignment

In all cases, the employed coupling system must be able to absorb such misalignment and prevent any negative effects of loads on shafts, bearings, supports and frames. Misalignment can also cause fatigue or wear in the coupling and therefore, during selection, the rotation speed must be taken into account, reducing as much as possible the maximum acceptable misalignment figures that are given in the tables for each model.

For transmission

This is not important for measurement systems. For power drives, it should be verified that the torque to be transmitted is less than the rated torque given in the performance tables, with greater margins in accordance with the expected misalignment.

Kinematic precision

In measurement systems and high-precision drives, it is important that the coupling does not cause any positional phase differences between the shafts.

All models in the ENCO-FLEX range are free from torsional play and only the OLDHAM may acquire a certain amount of free play after a time working with significant radial misalignment (and this can be corrected by replacing the disc). If the load torque or inertia in the driven shaft is significant, phase differences may be produced due to the torsional elasticity in the coupling. In such cases, the use of models that are not very rigid, such as the SPRING-FLEX or POLY-FLEX, should be avoided.

Rotation speed

The OLDHAM-FLEX and SPRING-FLEX models are not suitable for high-speed shafts, especially if there is significant misalignment. For the rest of the couplings, it must be taken into account that their useful lifetime depends on fatigue and hence the speed at which they operate.

Securing to shafts

Couplings can be supplied with fixing setscrews (two at 90°) or with a built-in clamp-flange.

Clamp securing has the advantage of not producing any marks on the shafts, thus they are better able to withstand sharp inversions and vibration. Setscrews are more economic and allow larger diameters to be employed for the same coupling. The inconvenience of setscrews is that they can produce flaws on the shafts. Moreover, they can loosen due to vibration, but this can be avoided by using a semi-permanent adhesive.

ALU-FLEX

ALUMINIUM GROOVED FLEXIBLE COUPLINGS OR STAINLESS STEEL

- Without free-plays. They do not produce any speed variations in the transmission
- High torsional rigidity
- Available with setscrews and built-in clamps
- Resistant to oils and chemical products
- Mechanical protection against excessive torque

ALU-FLEX are single flexible couplings in a single piece, machined from hardened aluminium alloy.

They are suitable for transmissions that require moderate torque and when shaft misalignment is not very large. They act as mechanical fuses to excessive torques.

These couplings are suitable for measurement and control systems, together with reduced torque drives. They permit transmission of very precise kinematic movement, without free-

play and with low torsional elasticity. They are recommended for auxiliary machines, tachometric generators potentiometers and encoders etc.

The coupling will absorb errors in alignment and shaft installation.

POLY-FLEX

ACETAL GROOVED FLEXIBLE COUPLINGS

- Absorption of significant angular and radial deviations
- Low inertia
- Free of speed variations in the transmission
- Torsional vibration attenuation
- Electric and thermal insulation between the shafts
- Mechanical protection against excessive torque

POLY-FLEX are flexible couplings manufactured in polyamide and reinforced with fibreglass. Reduced size for applications that do not require high torque and where there is significant shaft misalignment.

The material provides excellent resistance to fatigue, which makes it very suitable for high-speed couplings. It absorbs torsional vibration and insulates the shafts both electrically and thermally, acting, where necessary, as a mechanical fuse.

The tightening of the setscrews has been reinforced by incorporating an aluminium fitting.

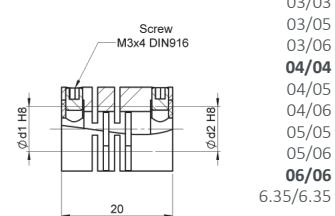

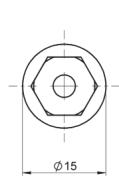

These couplings are suitable for measurement systems and machines that do not offer high resistant torque values. They are recommended for tachometric generators potentiometers and encoders, etc. POLY-FLEX couplings can be used in the temperature range of -30° to 85°.

SPRING-FLEX

FLEXIBLE COUPLING SPRINGS

- Absorption of significant misalignment
- Elimination of loads on the shafts due to misalignment
- Free of wear and fatigue
- Vibration absorption
- High torsional elasticity
- Protection against sudden acceleration in transmission

SPRING-FLEX couplings are based on the use of a helicoid spring as an elastic transmission element. These springs are constructed from stainless steel with a plane section. Spring ends are designed to prevent its rotation.

The result is a highly elastic coupling that enables very misaligned shafts to be coupled without the reactions on the bearings being excessively high. The coupling maintains its properties in both

directions of rotations.

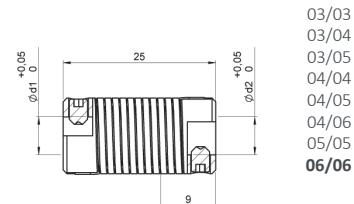

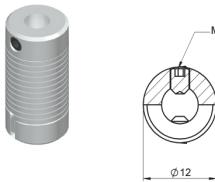

They are suitable for measurement systems and machines that do not offer a very high load torque and where the alignment of the shafts is not too tight or can cause variations (heat expansion, vibration and movements etc.).

BELLOW-FLEX

FLEXIBLE METAL BELLOWS COUPLINGS

- High absorption of misalignments
- Elimination of loads on the shafts due to misalignment
- No wear and tear or fatigue
- No cinematic errors in transmission
- High torsional stiffness

BELLOW-FLEX couplings are based on the use of flexible metal bellows that can transmit the moment of rotation while compensating for errors of alignment without hardly any distortion due to torsional elasticity.

The characteristics of the BELLOW-FLEX produce speed transmission of great precision, including high torque and speeds, which recommend them for servo-actions, precision

machinery, installation of control and measurement, etc.

The number of convolutions in the bellow has been chosen in the search for a compromise between the transmittable torque and the admissible misalignments.

LAMI-FLEX

FLEXIBLE SHEET COUPLINGS

- Suitable for high speed
- High flexibility
- No cinematic errors in transmission
- High torsional rigidity

The LAMI-FLEX couplings are based on the use of some flexible steel or plastic membranes that pivot on the coupling, thus proportioning it a very good flexibility.

The characteristics of LAMI-FLEX result in a transmission of great precision movement.

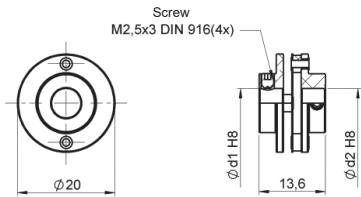

They are suitable for high rotation speeds, such as robots, machinetools, turbines, dynamometers ...

OLDHAM-FLEX

LATERAL SLIPPAGE COUPLINGS

- High absorption capacity of radial misalignment
- They do not produce kinematic errors in transmission
- Elimination of loads on shaft
- Mechanical protection against excessive torque
- Replaceable disc

OLDHAM-FLEX couplings are based on the use of a disc that can move radially with respect to the two shafts, which permits the compensation of large misalignment errors between them. The drums are machined from hardened aluminium alloy. The discs are manufactured from acetal with excellent mechanical properties and low friction coefficient.

Due to wear, the coupling may show free-play above 10^7 revolutions under normal misalignment conditions, which can be corrected by replacing the disc. Because the OLDHAM-FLEX couplings are fitted with securing drums with drilled holes, the discs can be installed and replaced without any need to

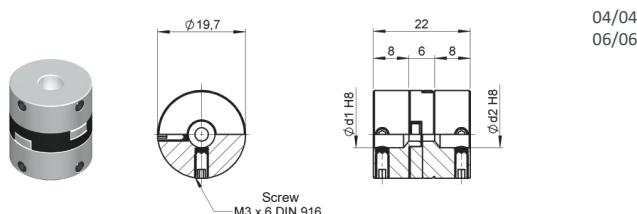

disassemble the machines in order to separate the shafts. Radial misalignment does not produce any appreciable kinematic errors in transmission. However, angular misalignment can lead to small errors in a similar fashion to "Cardan" types of universal joints. They are suitable for positioning shaft slow drives, spindles and valves, etc. They must never be employed with cantilever or paired shafts.

PAGU-FLEX

FLEXIBLE ISOLATING COUPLING

- High precision for positioning applications
- Without wear or fatigue
- Vibration absorption
- Good torsional elasticity

Adjuntoes to a great variety of uses, the PAGU-FLEX couplings have been designed flexibly in accordance with the existing agreements for the shaft, as well as with the different requirements of the specific application cases.

In the standard versions, each one of the galvanised heads (C15K material) has a cylindrical hole (H7 tolerance) and is fixed to the

shaft through a stay bolt with a hexagonal head DIN 916. The internal heads are very useful in situations with little space or reduced access.

CROSS-FLEX SPIDER COUPLING

- Free of cinematic errors in transmission
- Replaceable disc
- Elevated torque transmission
- Admits few misalignments

The CROSS-FLEX couplings are based on the use of a central disc. They are recommended for applications with some of the torque transmissions and with little misalignments.

With the use of the CROSS-FLEX couplings, the angular misalignments may lead to small errors. Radial misalignment does not produce any appreciable kinematic errors in transmission. Wear is minimum.

UNION

RIGID COUPLING

- High rigidity
- Free of cinematic errors in transmission
- Very little misalignment absorption
- Easy assembly, disassembly and adjustment

The UNION couplings are simple rigid couplings of two tooled steel pieces.

They are apt for transmissions that require elevated torques and where there are no misalignments between the shafts.

In the case of these couplings, the angular misalignments may lead to small errors. They are suitable for positioning shaft slow drives.

IN360/IN360T	C -	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/>
IN360. Standard IN360T. Temperature compensated	C. CANopen	C. Configurable: 1 axis (0...360°) or 2 axes (± 60°) (*)	2. Male M12 connector	

(*) Programmable settings instructions in IN360C reference manual, section 3.

SERIE IN360C

INCLINOMETER

CANopen®

MECHANICAL SPECIFICATIONS

Materials	Housing: Anodized aluminium
Protection according to DIN EN 60529	IP67
Weight	180 g (150...220 g)
Storage temperature range	-40° to +85°C
Operating temperature range	-40° to +85°C
Vibration according to DIN EN 60068-2-6	40 m/s ² (8,2Hz...500Hz), 5 cycles, on 3 axes
Shock according to DIN EN 60068-2-27	3000 m/s ² (11ms)
Connection	5-pole M12 male

ELECTRICAL SPECIFICATIONS

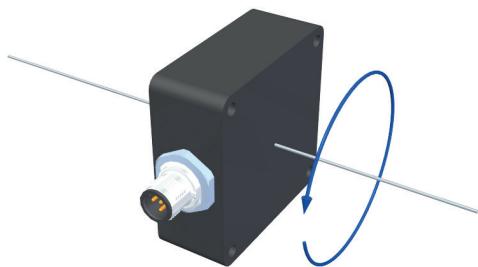

Range of measurement	0 ... 360° or ±180° (1 axis) ±5 ... ±60° (2 axes)
Resolution* (user programmable)	0.01° (1...0.001°)
Supply Voltage range	12/24 V (7...40 V)
Current consumption	30 mA (max. 45 mA)
High accuracy	±0.05 ... ±0.10° (0 ... 360°) ±0.05 ... ±0.15° (±60°)
Sample Rate	550 S/s
Baud Rate (user programmable)	500 Kbit/s (10...1000 Kbit/s)
Temperature drift	±0.008°/°C (IN360C) ±0.002°/°C (IN360TC)

(*) 0.001° only if range is below ±30° in 2-axes mode.

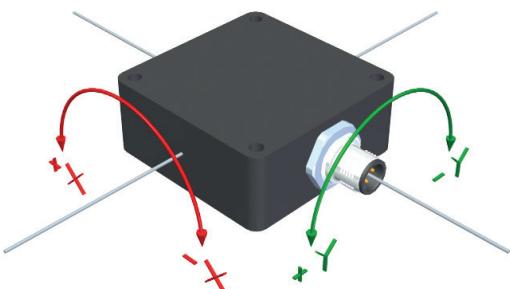

CONNECTION

	M12 5p male CCW
SHIELD - Optional CAN shield	1
VCC - Power supply	2
GND - Ground	3
Data AH - CAN_H bus line (dominant high)	4
Data BL - CAN_L bus line (dominant low)	5

1 AXIS

2 AXES

Zero degrees on the single-axis model (vertical operation position) are obtained by keeping the connector to the left.

In order to get the high accuracy performances, we suggest to fix the inclinometer with 4 countersunk screws, placed at the edges of the 4 slot-holes.

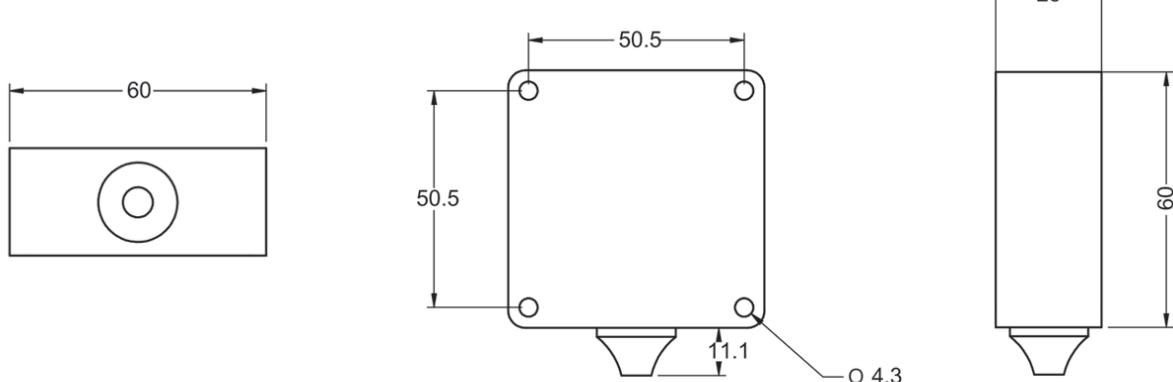

SERIE IN360A

INCLINOMETER

- Robust metal case protects from shocks and vibrations
- Filling resin protects against thermal shocks, moisture and harsh environments
- 1D and 2D inclination measurement
- Protection class IP67
- Analog output (4-20 mA or 0.5-4.5 V)
- Protected against reverse bias

Inclinometer 1 axis 2 axes IP 67 Temperature range Express Delivery

REFERENCE

Reference example: IN360A-114

Serie	Interface	Number of axis / Measuring range	Connection	Output signal	Special Customer
IN360	A -	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	. <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>

A. Analog output

1. 1 axis / 0...360°
2. 2 axes / ± 30°

1. Cable (0,5m)

4. 4...20 mA
5. 0,5...4,5 V

SERIE IN360A

INCLINOMETER

MECHANICAL SPECIFICATIONS

Materials	Housing: Anodized aluminium
Protection according to DIN EN 60529	IP67
Weight	200 g
Storage temperature range	-40° to +85°C
Operating temperature range	-40° to +85°C
Connection	0,5m open lead cable

ELECTRICAL SPECIFICATIONS

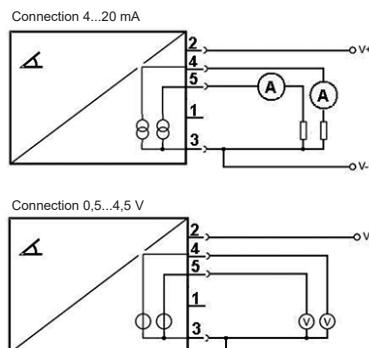

Range of measurement	0...360° (1 axis) ±30° (2 axes)
Resolution	7.33 µA (4...20 mA) 1.67 mV (0,5...4,5 V)
Supply Voltage	12/24 V (7...30 V)
Current consumption*	40 mA
Accuracy	±0.20° (max ±0.50°)
Temperature drift	±0.008°/°C
Load resistor	250 Ω; max 500 Ω (4...20 mA) 10 kΩ (0,5...4,5 V)

(*) Sensor current consumption is 40mA. At X and Y full scale (20mA+20mA), the total current consumption is 80mA.

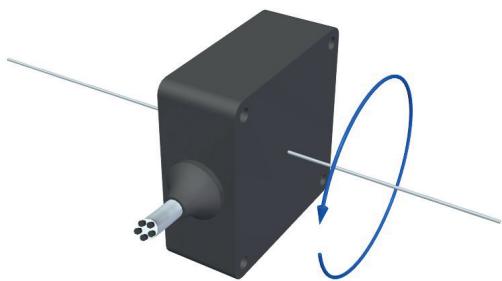

CONNECTION

	Open lead cable
IU - Internal use only (leave it open if present)	1
VCC - Power supply	2
GND - Ground	3
OUTX - Analog output (x-axis in 2-axes mode and 1-axis mode)	4
OUTY* - Analog output (y-axis in 2-axes mode)	5

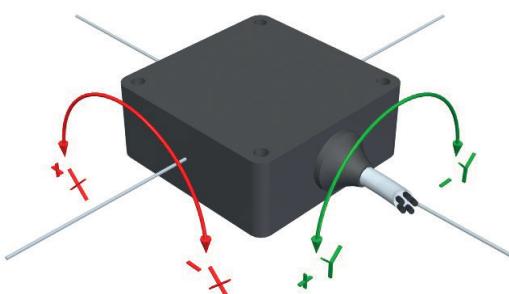

(*) OUTY - Not connected in 1-axis mode

1 AXIS

2 AXES

Zero degrees on the single-axis model (vertical operation position) are obtained by keeping the connector to the left.

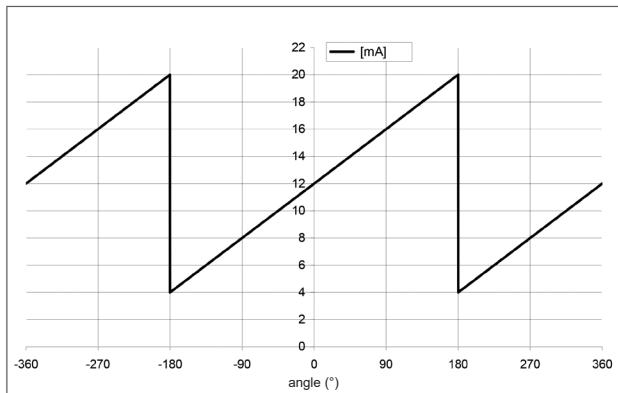

In order to get the high accuracy performances, we suggest to fix the inclinometer with 4 countersunk screws, placed at the edges of the 4 slot-holes.

VI96

IMPULSE COUNTER, RATEMETER AND PERIODMETER

TECHNICAL SPECIFICATIONS

Digits	6
Reading	999999 / -199999
Decimal point	Configurable
Led color	Red (standard)
Digital height	14 mm
Signals accepted	NPN, PNP, Namur, pick-up, TTL, inductive, mechanical, quadrature...
Excitation voltage	+5 Vdc, +9 Vdc, +15 Vdc, +18 Vdc (max. 70 mA)
Maximum Vdc at input terminals	±30 Vdc
Quartz accuracy	±0.01 %
Thermal stability	20 ppm/°C
Display refresh	15 refresh / second
Maximum frequencies	Counter up to 250 KHz Ratemeter and periodmeter up to 500 KHz
Minimum frequencies	Ratemeter and periodmeter down to 1 mHz (0.001 Hz)
Power 'H'	85 to 265 Vac/dc (isolated 1500 Veff)
Power 'L'	11 to 60 Vdc and 24/48 Vac (isolated 1500 Veff)
Retransmission and control options	Relays, analog output, serial communications...
Consumption	<1.5 W (meter only) <4.0 W (meter with options)
Front protection	IP65
Connections	Plug-in screw terminal
Weight	<150 grams
Mounting	Panel
Front size	96 x 48 mm
Panel cut-out	92 x 44 mm
Deep	91 mm (including terminals)
Operating temperature range	0 to 50 °C

VI96

IMPULSE COUNTER, RATEMETER AND PERIODMETER

FUNCTIONS INCLUDED

Fast access' menu	A single press on the front keypad gives access to alarm setpoint modification, preset, memories...
Function 'SLOW'	Special mode for low frequency ratemeter applications
Function 'FAST'	Special mode for high frequency counter applications
Scaling factor	Multiplier and divider from 1 to 999999
Configurable reset	Front and rear reset, and reset linked to alarm activation
Preset	Configurable
Trigger level	Configurable
Function 'Trigger Sense'	Help on setting the correct trigger level
Sensor selection	By menu
Cycle counter	Count of cycles defined by the 'on alarm reset' function
Retention memory	Recovers the counting value in case of power loss
On power-up' function	Protects remote systems by delaying the output and control signals at cold start-up
Alarms	With one or two setpoints, independent activation and deactivation delays, hysteresis, optional manual deactivation of the relay
Inverted relay	For security applications
Display filters	Recursive filters for unstable signals
Brightness	5 levels of brightness intensity
Password	Blocks access to configuration menu
